CDP Corporate Questionnaire 2026

Word version

Important: this export excludes unanswered questions

This document is an export of your organization's CDP questionnaire response. It contains all data points for questions that are answered or in progress. There may be questions or data points that you have been requested to provide, which are missing from this document because they are currently unanswered. Please note that it is your responsibility to verify that your questionnaire response is complete prior to submission. CDP will not be liable for any failure to do so.

Contents

C1. Introduction

(1.1) In which language are you submitting your response?

Select from:

☒ English

(1.2) Select the currency used for all financial information disclosed throughout your response.

Select from:

☒ USD

(1.3) Provide an overview and introduction to your organization.

(1.3.2) Organization type

Select from:

☒ Publicly traded organization

(1.3.3) Description of organization

Avient Corporation is incorporated in Ohio and headquartered in Avon Lake, Ohio. We currently have 98 manufacturing sites in North America, South America, Europe, the Middle East, Asia, and Africa (EMEA). The company, formerly PolyOne Corporation is a premier innovator of material solutions to help our customers succeed, while enabling a sustainable world. The company is dedicated to serving customers in diverse industries around the globe, by creating value through specialization, collaboration, innovation and an unwavering commitment to excellence. Guided by its Core Values, Sustainability Promise and No Surprises Pledge, Avient is an ACC Responsible Care, and a Great Place to Work certified company. As one of the world's leading innovator of material solutions, Avient contributes to value creation with innovative and sustainable solutions for customers from many industries. Through collaboration, innovation and excellence, our product portfolio is designed to ensure our customer's success. Additionally, our research and development is focused on finding innovative solutions to many of the key challenges facing society today. These include energy efficiency, renewable raw materials, light weighting and conserving natural resources. We aim to create a world-class organization by enabling a sustainable world, preserving the planet, and building a culture of safety and sustainability for both internal and external stakeholders. Avient does not limit itself to simply complying with the legal requirements, but also takes part in a variety of voluntary sustainability programs, including commitments to the Responsible Care principles and Operation Clean Sweep as well as self-initiated commitments such as its Code of Conduct and Supplier Code of Conduct. In all of its activities, Avient puts high emphasis on environmental protection and safety. The company's internal standards and management systems on environment, health and safety are certified to the Responsible Care 14001 Management System (RC14001). In addition, Avient has externally certified EHS&S management

systems, including ISO 9001 worldwide. Additionally, 49% of our facilities are certified to ISO 14001/Responsible Care 14001, and 30% of our high energy sites are certified to ISO 50001. Each production facility adheres vigorously to the company's global standards that ensure safe and environmentally compliant operations. In Avient's product portfolio, clear sustainability criteria were established and are marketed as Sustainable Solutions based upon the FTC's Guidelines for the Use of Environmental Marketing Claims. These guides, developed by the Federal Trade Commission, consist of general principles and specific guidance on the use of particular environmental claims. Products that are renewable, re-usable, recyclable, have an eco-conscious attribute, or meet resource efficiency guidelines fall within this category. On this basis, company products and solutions are reviewed and classified in terms of their sustainability performance. Upon this, measures can be built for strategic decision-making in investments on product development as well as communication. Avient has defined our Sustainability Portfolio in the eight ways we help our customers meet their innovation and sustainability goals through material science. Sustainability is a key driver of our innovation strategy. As the world continues to shift from operating in a linear economy to a circular economy, Avient is proud to be a part of the solution. Through our design expertise and material science innovation, we help our customers reduce material usage, enable recycle solutions, improve physical performance and reuse potential of recycled materials.

[Fixed row]

(1.4) State the end date of the year for which you are reporting data. For emissions data, indicate whether you will be providing emissions data for past reporting years.

	End date of reporting year	Alignment of this reporting period with your financial reporting period	Indicate if you are providing emissions data for past reporting years
	12/31/2025	Select from: ☒ Yes	Select from: ☒ No

[Fixed row]

(1.4.1) What is your organization’s annual revenue for the reporting period?

3260000000

(1.5) Provide details on your reporting boundary.

	Is your reporting boundary for your CDP disclosure the same as that used in your financial statements?
	<i>Select from:</i> ☒ Yes

[Fixed row]

(1.6) Does your organization have an ISIN code or another unique identifier (e.g., Ticker, CUSIP, etc.)?

ISIN code - bond

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ No

ISIN code - equity

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ Yes

(1.6.2) Provide your unique identifier

05368V1061

CUSIP number

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ Yes

(1.6.2) Provide your unique identifier

05368V106

Ticker symbol

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ Yes

(1.6.2) Provide your unique identifier

AVNT

SEDOL code

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ No

LEI number

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ No

D-U-N-S number

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ Yes

(1.6.2) Provide your unique identifier

84-508-2861

Other unique identifier

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ No

[Add row]

(1.7) Select the countries/areas in which you operate.

Select all that apply

☒ Peru

☒ Chile

☒ China

☒ India

☒ Italy

☒ Poland

☒ Sweden

☒ Belgium

☒ Czechia

☒ Denmark

☒ Colombia

☒ Malaysia

☒ Pakistan

☒ Thailand

☒ Spain

☒ Brazil

☒ Canada

☒ France

☒ Mexico

☒ Finland

☒ Germany

☒ Hungary

☒ Ireland

☒ Türkiye

☒ Argentina

☒ Guatemala

☒ Indonesia

☒ Singapore

- ☒ Netherlands
- ☒ New Zealand
- ☒ Saudi Arabia
- ☒ South Africa
- ☒ Taiwan, China

- ☒ Luxembourg
- ☒ United Kingdom
- ☒ United States of America

(1.8) Are you able to provide geolocation data for your facilities?

	Are you able to provide geolocation data for your facilities?	Comment
	Select from: ☒ No, this is confidential data	Avient does not wish to share the specific location of sites as it relates to water data

[Fixed row]

(1.24) Has your organization mapped its value chain?

(1.24.1) Value chain mapped

Select from:

- ☒ Yes, we have mapped or are currently in the process of mapping our value chain

(1.24.2) Value chain stages covered in mapping

Select all that apply

- ☒ Upstream value chain
- ☒ Downstream value chain

(1.24.3) Highest supplier tier mapped

Select from:

☒ Tier 1 suppliers

(1.24.4) Highest supplier tier known but not mapped

Select from:

☒ Tier 2 suppliers

(1.24.7) Description of mapping process and coverage

Avient has a Sustainable Sourcing Program, that focuses on embedding sustainable practices into our supply chain decisions. Through this program, we have mapped 90% of direct suppliers (tier 1) by spend. In 2024, we completed the second phase of the program, focusing on the implementation of Resilinc as our third-party risk management partner. Through this initiative, our team members received training on the program and learned how to assess supply partners based on key risk areas: quality, raw material profile, and ESG performance. Avient continues to partner with EcoVadis to conduct ESG evaluations. In 2025, Avient gathered sustainability assessments covering 80% of our total direct sourcing spend. Among the assessed suppliers, 66% received an EcoVadis medal rating in their overall scorecard evaluation.

[Fixed row]

(1.24.1) Have you mapped where in your direct operations or elsewhere in your value chain plastics are produced, commercialized, used, and/or disposed of?

(1.24.1.1) Plastics mapping

Select from:

☒ Yes, we have mapped or are currently in the process of mapping plastics in our value chain

(1.24.1.2) Value chain stages covered in mapping

Select all that apply

☒ Upstream value chain

☒ Downstream value chain

☒ End-of-life management

(1.24.1.4) End-of-life management pathways mapped

Select all that apply

☒ Leakage

☒ Landfill

☒ Recycling

☒ Incineration

☒ Waste to Energy

[Fixed row]

☒ Mismanaged waste

☒ Preparation for reuse

☒ Composting (industrial/home)

C2. Identification, assessment, and management of dependencies, impacts, risks, and opportunities

(2.1) How does your organization define short-, medium-, and long-term time horizons in relation to the identification, assessment, and management of your environmental dependencies, impacts, risks, and opportunities?

Short-term

(2.1.1) From (years)

0

(2.1.3) To (years)

5

(2.1.4) How this time horizon is linked to strategic and/or financial planning

Short-term time horizons are aligned with Avient's Enterprise Risk Management process and defined in alignment with industry best practices for climate-related scenario analysis. Strategically and financially, this timeframe is utilized in our capital expenditure (CAPEX) planning for energy efficiency and waste optimization initiatives, which are instrumental in reaching our medium-term sustainability goals.

Medium-term

(2.1.1) From (years)

5

(2.1.3) To (years)

15

(2.1.4) How this time horizon is linked to strategic and/or financial planning

Medium-term time horizons are aligned with Avient’s Enterprise Risk Management process and defined in alignment with industry best practices for climate related scenario analysis. Avient announced its 2030 Sustainability goals five years ago, forming a key component of the company's medium-term climate strategy.

Long-term

(2.1.1) From (years)

15

(2.1.2) Is your long-term time horizon open ended?

Select from:

☒ No

(2.1.3) To (years)

30

(2.1.4) How this time horizon is linked to strategic and/or financial planning

Long-term time horizons are aligned with Avient’s Enterprise Risk Management process and defined in alignment with industry best practices for climate related scenario analysis. This period is in line with Avient's objective of achieving operational carbon neutrality by 2050.
[Fixed row]

(2.2) Does your organization have a process for identifying, assessing, and managing environmental dependencies and/or impacts?

	Process in place	Dependencies and/or impacts evaluated in this process
	Select from:	Select from:

	Process in place	Dependencies and/or impacts evaluated in this process
	☒ Yes	☒ Both dependencies and impacts

[Fixed row]

(2.2.1) Does your organization have a process for identifying, assessing, and managing environmental risks and/or opportunities?

	Process in place	Risks and/or opportunities evaluated in this process	Is this process informed by the dependencies and/or impacts process?
	Select from: ☒ Yes	Select from: ☒ Both risks and opportunities	Select from: ☒ Yes

[Fixed row]

(2.2.2) Provide details of your organization's process for identifying, assessing, and managing environmental dependencies, impacts, risks, and/or opportunities.

Row 1

(2.2.2.1) Environmental issue

Select all that apply

☒ Climate change

(2.2.2.2) Indicate which of dependencies, impacts, risks, and opportunities are covered by the process for this environmental issue

Select all that apply

- ☒ Dependencies
- ☒ Impacts
- ☒ Risks
- ☒ Opportunities

(2.2.2.3) Value chain stages covered

Select all that apply

- ☒ Direct operations
- ☒ Upstream value chain
- ☒ Downstream value chain

(2.2.2.4) Coverage

Select from:

- ☒ Partial

(2.2.2.5) Supplier tiers covered

Select all that apply

- ☒ Tier 1 suppliers

(2.2.2.7) Type of assessment

Select from:

- ☒ Qualitative and quantitative

(2.2.2.8) Frequency of assessment

Select from:

- ☒ More than once a year

(2.2.2.9) Time horizons covered

Select all that apply

- ☒ Short-term
- ☒ Medium-term
- ☒ Long-term

(2.2.2.10) Integration of risk management process

Select from:

- ☒ Integrated into multi-disciplinary organization-wide risk management process

(2.2.2.11) Location-specificity used

Select all that apply

- ☒ Site-specific
- ☒ National

(2.2.2.12) Tools and methods used

Enterprise Risk Management

- ☒ Enterprise Risk Management

International methodologies and standards

- ☒ Environmental Impact Assessment
- ☒ ISO 14001 Environmental Management Systems
- ☒ Life Cycle Assessment
- ☒ Other international methodologies and standards, please specify :Responsible Care 14001 (RC14001) EHS&S Management System (MS)

Databases

- ☒ Nation-specific databases, tools, or standards, please specify

- ☒ Regional government databases, please specify

Other

- ☒ External consultants
- ☒ Internal company methods
- ☒ Materiality assessment
- ☒ Partner and stakeholder consultation/analysis
- ☒ Scenario analysis

(2.2.2.15) Risk types and criteria considered

Acute physical

- ☒ Drought
- ☒ Cold wave/frost
- ☒ Cyclone, hurricane, typhoon
- ☒ Heavy precipitation (rain, hail, snow/ice)
- ☒ Flood (coastal, fluvial, pluvial, ground water)
- ☒ Storm (including blizzards, dust, and sandstorms)

Chronic physical

- ☒ Changing wind patterns
- ☒ Heat stress
- ☒ Increased severity of extreme weather events
- ☒ Sea level rise
- ☒ Solifluction

Policy

- ☒ Carbon pricing mechanisms

Market

- ☒ Changing customer behavior
- ☒ Lack of availability and/or increased cost of certified sustainable material

- ☒ Lack of availability and/or increased cost of raw materials
- ☒ Uncertainty in market signals

Reputation

- ☒ Other reputation risk, please specify :Increased concern from stakeholders for not addressing climate change globally or for the chemicals sector

Technology

- ☒ Transition to lower emissions technology and products
- ☒ Unsuccessful investment in new technologies
- ☒ Other technology risk, please specify :Increased fines and/or compliance measures

Liability

- ☒ Exposure to sanctions and litigation
- ☒ Non-compliance with regulations and legislation
- ☒ Other liability risk, please specify :Increased fines and/or compliance measures

(2.2.2.16) Partners and stakeholders considered

Select all that apply

- | | |
|---|---|
| ☒ NGOs | ☒ Regulators |
| ☒ Customers | ☒ Local communities |
| ☒ Employees | |
| ☒ Investors | |
| ☒ Suppliers | |

(2.2.2.17) Has this process changed since the previous reporting year?

Select from:

- ☒ No

(2.2.2.18) Further details of process

Avient assesses dependencies and impacts through the environmental aspect and impact assessment process, using Responsible Care (RC) 14001 EH&S Management System (EH&S MS), focusing on energy, emissions, climate change, and effluents and waste management from our operations. Avient's EH&S MS is managed by our Corporate Environmental, Health, Safety and Product Stewardship Department. The foundation of our EH&S MS is rooted in American Chemistry Council's (ACC) Responsible Care. This comprehensive EH&S MS systemically identifies and addresses any EHS related risks and is comprised of global standards for safety, health, security, product safety, and environmental protection. It covers both regulatory requirements and voluntary actions. The standard is used to identify several potential aspects and associated impacts that Avient has on nature, such as climate change, the release of hazardous chemicals affecting air quality, and water usage contributing to resource depletion. Activities beyond these standards include environmental impact assessments, enterprise risk assessments, product carbon footprinting, ISO 14001 & ISO 50001 certifications at selected sites, and risk identification in product and process safety. These activities have created unified procedures globally across the organization, while maintaining necessary business flexibility for the different businesses that comprise Avient's commercial portfolio of specialty polymer products. Avient's Enterprise Risk Management (ERM) process helps identify and assess climate-related risks at a company-level. This process focuses on financial, operational, and reputational risks. As part of this process, we engage with our Board of Directors, executive management team, and ERM risk owners. Once risks are identified the likelihood of occurrence and potential impact of each risk is evaluated and assessed considering both before and after consideration of mitigating activities. The prioritized risks are reviewed annually with executive management and other relevant internal stakeholders through heat-maps that represents the low, medium, and high (impact) areas of risk. For high impact risks, ERM risk owners are assigned to actively manage the risk. These owners identify risks, gather data on exposure severity and likelihood, and develop management methods and action plans, contributing to the risk profile, which is routinely reviewed and updated. For medium and low impact risks, risk appetite for each risk is defined and KRIs are defined for regular monitoring. This process helps us ensure our risk identification and responses remain up to-date, mitigation actions remain effective, and that new and emerging risks are considered in our assessment. Using 2024 data, Avient also completed a Climate Change Scenario analysis. The analysis utilized ERM findings to continuously identify and monitor our management of the physical climate change-related risks including extreme weather events, supply chain disruptions, and technology changes, as well as transitional climate risks associated with legal, regulatory, policy, low carbon energy transition and liability issues. By aligning with the ISSB recommendations, Avient expanded the existing risk management practices to incorporate the analysis of medium to longer-term climate-related risks and opportunities under various climate scenarios, which better positions us to manage future risks as well as capture new business opportunities.

Row 2

(2.2.2.1) Environmental issue

Select all that apply

☒ Water

(2.2.2.2) Indicate which of dependencies, impacts, risks, and opportunities are covered by the process for this environmental issue

Select all that apply

☒ Dependencies

☒ Impacts

☒ Risks

- ☒ Opportunities

(2.2.2.3) Value chain stages covered

Select all that apply

- ☒ Direct operations
- ☒ Upstream value chain
- ☒ Downstream value chain

(2.2.2.4) Coverage

Select from:

- ☒ Partial

(2.2.2.7) Type of assessment

Select from:

- ☒ Quantitative only

(2.2.2.8) Frequency of assessment

Select from:

- ☒ Annually

(2.2.2.9) Time horizons covered

Select all that apply

- ☒ Long-term

(2.2.2.10) Integration of risk management process

Select from:

- ☒ A specific environmental risk management process

(2.2.2.11) Location-specificity used

Select all that apply

☒ Site-specific

(2.2.2.12) Tools and methods used

Commercially/publicly available tools

☒ WRI Aqueduct

(2.2.2.15) Risk types and criteria considered

Chronic physical

☒ Water stress

(2.2.2.16) Partners and stakeholders considered

Select all that apply

☒ Customers

☒ Employees

☒ Local communities

☒ Water utilities at a local level

(2.2.2.17) Has this process changed since the previous reporting year?

Select from:

☒ No

(2.2.2.18) Further details of process

Avient utilizes the World Resources Institute's (WRI) Aqueduct tool to evaluate water-related risks across its more than 100 global sites. The results help identify operations located in high and extremely high water-risk regions, enabling us to prioritize assessments, focus water stewardship efforts, and allocate resources where they can have the greatest impact.

[Add row]

(2.2.7) Are the interconnections between environmental dependencies, impacts, risks and/or opportunities assessed?

(2.2.7.1) Interconnections between environmental dependencies, impacts, risks and/or opportunities assessed

Select from:

☒ Yes

(2.2.7.2) Description of how interconnections are assessed

Avient uses Responsible Care (RC) 14001 EH&S Management System to identify environmental aspects and impacts of our activities, products, and services that we can control or influence. By identifying these aspects, Avient also determines their potential environmental impacts, such as resource depletion or pollution, and understand their dependencies on the environment. The process includes reviews of activities (including abnormal conditions and emergency situations), products and services within Avient's control from a life cycle perspective. During this process, risks are also identified and prioritized risks are communicated appropriately. Action plans are established to address its significant EHS&S aspects and risks and opportunities (6.1.1). This is done by integrating actions into the RC14001 MS through Objectives and Planning, Support, Operations, and Monitoring, Measurement, Analysis & Evaluation, demonstrating a systematic approach to environmental management. Within Operations, this includes Operating Procedures, Safety Procedures, and the Responsible Care Codes. The adequacy of controls over environmental aspects and impacts is periodically reviewed through a vigorous internal audit program. Actions arising from these audits are tracked to completion via the Corrective Action Program. This Program includes future effectiveness checks to ensure corrective actions are also preventive in nature and remain effective.

[Fixed row]

(2.3) Have you identified priority locations across your value chain?

(2.3.1) Identification of priority locations

Select from:

☒ Yes, we have identified priority locations

(2.3.2) Value chain stages where priority locations have been identified

Select all that apply

☒ Direct operations

☒ Upstream value chain

- ☒ Downstream value chain

(2.3.3) Types of priority locations identified

Sensitive locations

- ☒ Areas important for biodiversity
- ☒ Areas of limited water availability, flooding, and/or poor quality of water

(2.3.4) Description of process to identify priority locations

Avient uses the WRI Aqueduct tool and WWF Biodiversity tool to identify sites with high water and biodiversity risks

(2.3.5) Will you be disclosing a list/spatial map of priority locations?

Select from:

- ☒ No, we have a list/geospatial map of priority locations, but we will not be disclosing it

[Fixed row]

(2.4) How does your organization define substantive effects on your organization?

Risks

(2.4.1) Type of definition

Select all that apply

- ☒ Qualitative
- ☒ Quantitative

(2.4.2) Indicator used to define substantive effect

Select from:

- ☒ Asset value

(2.4.3) Change to indicator

Select from:

- ☒ % decrease

(2.4.4) % change to indicator

Select from:

- ☒ Less than 1%

(2.4.6) Metrics considered in definition

Select all that apply

- ☒ Frequency of effect occurring
- ☒ Time horizon over which the effect occurs
- ☒ Likelihood of effect occurring

(2.4.7) Application of definition

Avient considers an effect as substantive if it represents 0.5% of Total Assets value. Our Enterprise Risk Management process, used to assess various types of risks, also incorporates total assets as risk impact is quantified. The definition further incorporates qualitative indicators, such as the likelihood of a material that a reasonable person would deem an omission or misstatement important. This assessment of substantive effect is not solely based on numerical significance but also on the potential to significantly alter the information made available to investors.

Opportunities

(2.4.1) Type of definition

Select all that apply

- ☒ Qualitative
- ☒ Quantitative

(2.4.2) Indicator used to define substantive effect

Select from:

☒ Asset value

(2.4.3) Change to indicator

Select from:

☒ % increase

(2.4.4) % change to indicator

Select from:

☒ Less than 1%

(2.4.6) Metrics considered in definition

Select all that apply

☒ Frequency of effect occurring

☒ Time horizon over which the effect occurs

☒ Likelihood of effect occurring

(2.4.7) Application of definition

Avient considers an effect as substantive if it represents 0.5% of Total Assets value. Our Enterprise Risk Management process, used to assess various types of risks, also incorporates total assets as risk impact is quantified. The definition further incorporates qualitative indicators, such as the likelihood of a material that a reasonable person would deem an omission or misstatement important. This assessment of substantive effect is not solely based on numerical significance but also on the potential to significantly alter the information made available to investors.

[Add row]

(2.5) Does your organization identify and classify potential water pollutants associated with its activities that could have a detrimental impact on water ecosystems or human health?

(2.5.1) Identification and classification of potential water pollutants

Select from:

☒ Yes, we identify and classify our potential water pollutants

(2.5.2) Details of policies and processes in place to identify and classify potential water pollutants

Avient's Spill Prevention and Water Protection EHS Standard requires sites to implement measures to prevent spills, minimize the risk of contamination, and protect local water resources. Facilities identify and monitor potential pollutants in accordance with applicable regulations and site-specific risk profiles. To support these efforts, certain sites utilize third-party experts to perform detailed water quality analyses, including testing for parameters such as inorganic non-metals, inorganic metals, pH, and temperature. These assessments help ensure compliance, inform risk management decisions, and support ongoing water stewardship efforts.

[Fixed row]

(2.5.1) Describe how your organization minimizes the adverse impacts of potential water pollutants on water ecosystems or human health associated with your activities.

Row 1

(2.5.1.1) Water pollutant category

Select from:

☒ Other physical pollutants

(2.5.1.2) Description of water pollutant and potential impacts

Our standard focuses on taking a general approach to water protection rather than specifying water pollutants.

(2.5.1.3) Value chain stage

Select all that apply

☒ Direct operations

(2.5.1.4) Actions and procedures to minimize adverse impacts

Select all that apply

☒ Other, please specify :Sites are required to adhere to Avient's Spill Prevention and Water Protection standard, which outlines commitment, responsibilities, and approaches to minimize water pollutants that can cause harm to the environment or human health.

(2.5.1.5) Indicators for measuring and evaluating the success of the procedure

Select all that apply

☒ Compliance with discharge permits / regulatory limits

(2.5.1.6) Please explain

Sites are required to adhere to Avient's Spill Prevention and Water Protection standard, which outlines commitment, responsibilities, and approaches to minimize water pollutants that can cause harm to the environment or human health

[Add row]

C3. Disclosure of risks and opportunities

(3.1) Have you identified any environmental risks which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?

Climate change

(3.1.1) Environmental risks identified

Select from:

☒ Yes, both in direct operations and upstream/downstream value chain

Water

(3.1.1) Environmental risks identified

Select from:

☒ Yes, both in direct operations and upstream/downstream value chain

Plastics

(3.1.1) Environmental risks identified

Select from:

☒ No

(3.1.2) Primary reason why your organization does not consider itself to have environmental risks in your direct operations and/or upstream/downstream value chain

Select from:

☒ Environmental risks exist, but none with the potential to have a substantive effect on our organization

(3.1.3) Please explain

Avient does actively tracks the environmental risks associated with plastics and the impacts have been judged to be minimal. Active tracking continues in 2026.
[Fixed row]

(3.1.1) Provide details of the environmental risks identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future.

Climate change

(3.1.1.1) Risk identifier

Select from:

☒ Risk1

(3.1.1.3) Risk types and primary environmental risk driver

Policy

☒ Carbon pricing mechanisms

(3.1.1.4) Value chain stage where the risk occurs

Select from:

☒ Direct operations

(3.1.1.6) Country/area where the risk occurs

Select all that apply

☒ Chile

☒ Spain

☒ Canada

☒ France

☒ Poland

☒ Sweden

☒ Finland

☒ Germany

- ☒ Mexico

- ☒ Colombia
- ☒ Argentina
- ☒ Indonesia
- ☒ Singapore

- ☒ Hungary
- ☒ Luxembourg
- ☒ Netherlands
- ☒ New Zealand
- ☒ South Africa
- ☒ United Kingdom

(3.1.1.9) Organization-specific description of risk

Carbon emissions have become the subject of an increasing amount of state and local, regional, national, and international attention. Growing concerns about climate change may result in the imposition of additional regulations or restrictions to which Avient may become subject. These future regulatory developments related to climate change are likely and could increase our operating and compliance costs, thereby impacting our business and consolidated financial statements. As of 2025, 75 carbon pricing instruments have been implemented, or are scheduled for implementation at national, and subnational level according to the World Bank's "State and Trends of Carbon Pricing Dashboard". In 2025, five of Avient's facilities in Germany are also impacted by the BEHG - Germany's new Fuel Emissions Trading System and approximately 96% of our square footage is located in countries that have implemented or are adopting a range of methods to price carbon, such as carbon taxes or cap-and-trade. In the near- and medium-term future, the probability of this risk impacting Avient is low. In the long term, as the world transitions to a low-carbon economy, it is possible that Avient may be subject to increased pricing for GHG emissions if more governments adopt carbon-pricing mechanisms, thresholds for existing mechanisms are lowered, or industry-specific legislation is introduced.

(3.1.1.11) Primary financial effect of the risk

Select from:

- ☒ Increased direct costs

(3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

- ☒ Medium-term

(3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon

Select from:

- ☒ Likely

(3.1.1.14) Magnitude

Select from:

☒ Low

(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

We establish strategies and expectations related to climate change and other environmental matters, aiming to improve Avient's resilience to emerging regulations. Our ability to achieve any such strategies or expectations is subject to numerous factors and conditions, many of which are outside of our control. Examples of such factors include, but are not limited to, evolving legal, regulatory, and other standards, processes, and assumptions, the pace of scientific and technological developments, increased costs, the availability of requisite financing, and changes in carbon markets. Failures or delays (whether actual or perceived) in achieving our strategies or expectations related to climate change and other environmental matters could adversely affect our business, operations, and reputation, and increase risk of litigation.

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

☒ Yes

(3.1.1.21) Anticipated financial effect figure in the medium-term – minimum (currency)

3799640

(3.1.1.22) Anticipated financial effect figure in the medium-term – maximum (currency)

12823785

(3.1.1.25) Explanation of financial effect figure

*The financial impact is a range of carbon pricing in two scenarios. The first is a more conservative scenario that includes a carbon price of \$40/metric ton which is implemented in Latin American and Asian regions. The second is a more aggressive scenario, considers rapid transition to a low-carbon economy (based on a 2-degree scenario and in alignment of Avient's GHG reduction goal), a global carbon price of \$135/metric ton by 2030. Minimum potential financial impact figure is calculated using = \$40 * 94,991 MT CO₂e (2025 market-based Scope 1 & 2 emissions from manufacturing facilities, labs, warehouses and offices in countries where carbon pricing has been implemented) = \$3,799,640. Maximum potential financial impact figure is calculated using = \$135 * 94,991 MT CO₂e (2025 market-based Scope 1 & 2 emissions) = \$12,823,785.*

(3.1.1.26) Primary response to risk

Pricing and credits

☒ Implement internal price on carbon

(3.1.1.27) Cost of response to risk

5551000

(3.1.1.28) Explanation of cost calculation

We expect to invest in energy- and emissions-reducing activities at a similar or greater pace moving forward. As such, we estimate the yearly cost to respond as our 2025 energy saving initiatives: $\$5,551,000 * 1 \text{ year} = \$5,551,000$

(3.1.1.29) Description of response

Avient is committed to reduce Scope 1 & 2 GHG gas emissions by 55% by 2030 and achieve operational carbon neutrality by 2050 (against a 2019 baseline). Additionally, Avient became a member of the RE100 initiative in 2021, committing to achieving 60% renewable energy use by 2030. To help reduce consumption from non-renewable energy sources, and to facilitate the expansion of renewable energy availability, Avient continues to leverage VPPA. While expanding the procurement of renewable energy globally is an important element of our low carbon strategy, Avient also continues to explore and implement on-site renewable energy opportunities and energy saving projects. In 2025, we implemented 108 energy saving projects resulting in 12,803 MWh of annual savings. These projects have a cumulative effect on reducing our operational energy needs and thus our impacts on the environment. Avient's energy efficiency program that is driven by Corporate mandates to identify/execute/report energy savings activities at the facility level. Progress against this expectation is reviewed quarterly. Overarching goal of this objective is to identify savings potential through the calculation and analysis of energy consumption which drives optimized use of equipment and systems. To differentiate between different options and further support investments in clean and lower-carbon solutions, even when they do not present the most attractive returns, we give higher weighting factors to energy projects that ultimately improve overall scores and prioritize them in our investment decision matrix. Avient also established in 2022 the cost of carbon at 54.58 per ton CO₂ to encourage investments in low-carbon and carbon-free technologies. By 2025, this price increased to \$60.86. This pricing aligns with the range of scenarios Avient uses to evaluate the climate-related risks associated with the transition to a low-carbon economy, such as potential new carbon pricing regulations.

Water

(3.1.1.1) Risk identifier

Select from:

☒ Risk1

(3.1.1.3) Risk types and primary environmental risk driver

Chronic physical

☒ Water stress

(3.1.1.4) Value chain stage where the risk occurs

Select all that apply

☒ Indus
☒ Krishna
☒ Limpopo
☒ Mahi River
☒ Mississippi River
☒ Huang He (Yellow River)
☒ Colorado River (Pacific Ocean)
☒ Other, please specify :**Sabarmati, Scheldt, South & East Coast of Spain, Gulf of Thailand, Peru - Pacific Coast, China Coast, Arabian Peninsula, Arabian Sea Coast, Adriatic Sea. All basin information was retrieved from WRI Aqueduct tool.**
☒ Oder River

(3.1.1.9) Organization-specific description of risk

The likelihood reflects the possibility that one or more of our sites may experience a water-related issue at some point in the future due to changing environmental conditions, regulatory requirements, infrastructure constraints, or localized water stress. While water is not considered material to Avient's operations, we recognize that water-related risks can affect facilities in specific geographies and therefore continue to monitor and assess these potential impacts.

(3.1.1.11) Primary financial effect of the risk

Select from:

☒ Other, please specify :Since water is not material to our operations, the financial effect of this risk is anticipated to be low.

(3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

☒ Short-term

(3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon

Select from:

☒ About as likely as not

(3.1.1.14) Magnitude

Select from:

☒ Low

(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Given the relatively low water intensity of Avient's operations, the financial impact of this risk is expected to be low. The company continues to monitor water-related risks and implement appropriate management practices to maintain resilience and minimize potential business impacts.

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

☒ No

(3.1.1.26) Primary response to risk

Compliance, monitoring and targets

☒ Greater due diligence

(3.1.1.27) Cost of response to risk

0

(3.1.1.28) Explanation of cost calculation

Given the relatively low water intensity of Avient's operations, the financial impact of this risk is expected to be negligible.

(3.1.1.29) Description of response

While water is not a material input to Avient's operations, the company recognizes the importance of responsible water stewardship. Avient regularly monitors water use and site-level water stress to identify potential risks and inform management actions. Additionally, sites are required to implement annual water or waste reduction projects, helping to improve resource efficiency and reduce potential water-related risks over time.

[Add row]

(3.1.2) Provide the amount and proportion of your financial metrics from the reporting year that are vulnerable to the substantive effects of environmental risks.

Climate change

(3.1.2.1) Financial metric

Select from:

☒ OPEX

(3.1.2.2) Amount of financial metric vulnerable to transition risks for this environmental issue (unit currency as selected in 1.2)

0

(3.1.2.3) % of total financial metric vulnerable to transition risks for this environmental issue

Select from:

☒ Less than 1%

(3.1.2.4) Amount of financial metric vulnerable to physical risks for this environmental issue (unit currency as selected in 1.2)

0

(3.1.2.5) % of total financial metric vulnerable to physical risks for this environmental issue

Select from:

☒ Less than 1%

(3.1.2.7) Explanation of financial figures

None of the physical or transition risks in CY 2024 had a substantive effect on Avient's operational expenses, so the disclosed amount is 0. However, Avient remains committed to optimizing energy consumption and allocated approximately \$5.51 million in 2025 to execute 108 energy saving projects.

Water

(3.1.2.1) Financial metric

Select from:

☒ CAPEX

(3.1.2.2) Amount of financial metric vulnerable to transition risks for this environmental issue (unit currency as selected in 1.2)

(3.1.2.3) % of total financial metric vulnerable to transition risks for this environmental issue

Select from:

☒ Less than 1%

(3.1.2.4) Amount of financial metric vulnerable to physical risks for this environmental issue (unit currency as selected in 1.2)

0

(3.1.2.5) % of total financial metric vulnerable to physical risks for this environmental issue

Select from:

☒ Less than 1%

(3.1.2.6) Amount of CAPEX in the reporting year deployed towards risks related to this environmental issue

740000

(3.1.2.7) Explanation of financial figures

Each year, Avient allocates funds towards site-level water-related projects. These projects are usually focused on improving efficiency, reducing consumption, and/or reducing risk. Because water is not material to our organization, we don't foresee any large financial risks for this environmental issue. If one of our sites are no longer able to access the water needed, we can transition operations from that location to another one of our sites in the region.

[Add row]

(3.2) Within each river basin, how many facilities are exposed to substantive effects of water-related risks, and what percentage of your total number of facilities does this represent?

0

(3.5.2.10) Details of ownership

Select from:

☒ Facilities we own and operate

(3.5.2.11) Comment

Avient did not purchase allowances for greenhouse gas emissions from heating. Avient is impacted by the price increase caused by allowances as we are buying natural gas from suppliers who need to purchase allowances in order to comply with the Germany ETS system.

[Fixed row]

(3.5.4) What is your strategy for complying with the systems you are regulated by or anticipate being regulated by?

We comply with the systems by which we are regulated by keeping up-to-date on existing and upcoming emissions trading schemes. Our Sustainability Council monitors shifting regulations to ensure Avient knows how, when, and if any country of our operations may be impacted. If we were to be regulated by a system, we would assess the impact of our current regional carbon reduction strategies and engage our supply chain to adapt to meet requirements. We expect that we may be further regulated by a carbon pricing system in the EU in future. As a mitigation strategy, energy efficiency projects are prioritized at our EU sites. Our high energy sites in Germany are certified to ISO 50001. Additionally, we are exploring the development of a management system modeled after ISO 50001 certification system applicable to all global locations.

(3.6) Have you identified any environmental opportunities which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?

	Environmental opportunities identified
Climate change	Select from: ☒ Yes, we have identified opportunities, and some/all are being realized
Water	Select from: ☒ Yes, we have identified opportunities, and some/all are being realized

[Fixed row]

(3.6.1.8) Organization specific description

Sustainability is a key driver of our innovation strategy, and in 2025, 66% of the projects in our innovation pipeline were focused on sustainable solutions. We enable our innovation strategy through investment in R&D, sales and marketing resources. We launched over 17 new sustainability enabling solutions in 2025, driven by our Phased Offering Launch & New Product Development processes, proprietary means through which we take new solution ideas from concept to commercialization.

(3.6.1.9) Primary financial effect of the opportunity

Select from:

- ☒ Increased revenues through access to new and emerging markets

(3.6.1.10) Time horizon over which the opportunity is anticipated to have a substantive effect on the organization

Select all that apply

- ☒ Short-term

(3.6.1.11) Likelihood of the opportunity having an effect within the anticipated time horizon

Select from:

- ☒ Likely (66–100%)

(3.6.1.12) Magnitude

Select from:

- ☒ Medium-high

(3.6.1.14) Anticipated effect of the opportunity on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Our innovation of material solutions has enabled the highest margins in the company's history. Avient's portfolio offering is better positioned than ever before to deliver growth through innovative materials solutions to exceed customer needs. Our focus in our core growth areas of sustainable solutions, composites, healthcare,

and emerging regions will take the company to new heights with a revitalized focus on innovation. Investments in these growth areas will continue to drive revenue and earnings expansion and generate long-term value creation.

(3.6.1.15) Are you able to quantify the financial effects of the opportunity?

Select from:

☒ Yes

(3.6.1.17) Anticipated financial effect figure in the short-term - minimum (currency)

1699542400

(3.6.1.18) Anticipated financial effect figure in the short-term – maximum (currency)

2113964100

(3.6.1.23) Explanation of financial effect figures

We have categorized our portfolio of solutions and services into three drivers of sustainability—RENEW, REDUCE and PRESERVE. There are eight ways in which we help our customers to meet their innovation and sustainability goals through material science, which includes lightweighting, reduced energy usage, VOC reduction, improved recycle solutions, bio-polymers, eco-conscious benefits, sustainable infrastructure and human health & safety. This portfolio has grown from \$340M in 2016 to \$1,071M in 2025, and the megatrends of the future indicate continued growth and demand. Potential financial impact with 8 or 12% YoY growth = 2025 portfolio \$ amount * (8% or 12% + 1)^number of years of investment. Minimum: \$1071 million * (8%+1)^6 = \$1,699,542,399, rounded as \$1,699,542,400
Maximum: \$1,071 million * (12%+1)^6= \$2,113,964,095, rounded as \$2,113,964,100

(3.6.1.24) Cost to realize opportunity

96700000

(3.6.1.25) Explanation of cost calculation

100% of Avient's R&D budget is used to address customer demand, which increasingly includes sustainable solutions. As such, the annual cost of response is Avient's 2025 R&D spend \$96.7 million * 1 year = \$96,700,000

(3.6.1.26) Strategy to realize opportunity

Our Research and Development teams are continually tasked with the development of new products and services while continuing to adhere to standards defined by programs such as our Sustainability Solutions where possible. Avient understands the financial value that increased consumer demands for these lower emissions products can bring and has sought to appropriately invest capital and resources to ensure we maintain this competitive advantage. Our technology goals are aligned with our purpose to be an innovator of materials solutions to help our customers succeed while enabling a sustainable world. Our efforts are largely devoted to developing new product formulations to address evolving market and sustainability needs. We do this by providing quality technical services to evaluate alternative raw materials, facilitating the continued success of our products for customer applications, providing technology to improve our products, processes and applications and providing support to our manufacturing plants for cost reduction, productivity and quality improvement programs. We operate research and development centers that support our commercial development activities and manufacturing operations. These facilities are equipped with state-of-the-art analytical, synthesis, polymer characterization and testing equipment along with pilot plants and polymer manufacturing operations that simulate specific production processes. This allows us to rapidly translate new technologies into new products, helping us advance a more circular economy with reduced carbon footprint. Avient's portfolio of REDUCE solutions includes design and material solutions that enable customers to reduce weight, energy consumption and emissions. For example the Edgetek PKE series consists of specialty engineered polyketone (PK) thermoplastics designed to offer manufacturers a high-performing, cost-competitive, and eco-conscious alternative to traditional nylons (PA66 and PA6). With excellent chemical resistance, low moisture uptake, high dimensional stability, and superior impact and wear resistance, these formulations are ideal for demanding applications in industrial, electronics, and transportation sectors. They can be customized for specific needs and process efficiently with similar shrink rates to nylons. Additionally the PK base resin significantly reduces the carbon footprint, emitting up to 61% less CO₂ than nylon production, enhancing sustainability throughout the product lifecycle.

Water

Select from:

☒ Opp2

(3.6.1.3) Opportunity type and primary environmental opportunity driver

Resource efficiency

☒ Other resource efficiency opportunity, please specify :Low carbon technologies and energy savings projects

(3.6.1.4) Value chain stage where the opportunity occurs

Select from:

☒ Direct operations

(3.6.1.5) Country/area where the opportunity occurs

Select all that apply

☒ United States of America

(3.6.1.8) Organization specific description

In 2023, Avient joined the U.S. Department of Energy's Better Plants Program. By aligning with Better Plants, Avient has pledged to reduce energy intensity by 25% over the next 10 years, demonstrating its dedication to sustainable practices and bolstering its competitiveness in the industry. In 2025, Avient invested \$5,510,000 in energy efficiency projects.

(3.6.1.9) Primary financial effect of the opportunity

Select from:

☒ Reduced indirect (operating) costs

(3.6.1.10) Time horizon over which the opportunity is anticipated to have a substantive effect on the organization

Select all that apply

☒ Long-term

(3.6.1.11) Likelihood of the opportunity having an effect within the anticipated time horizon

Select from:

☒ Likely (66–100%)

(3.6.1.12) Magnitude

Select from:

☒ Medium-high

(3.6.1.14) Anticipated effect of the opportunity on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Proactive investments in energy efficiency are expected to strengthen Avient's financial position by reducing long-term operating and capital costs. As energy demand declines through efficiency improvements and electrification, these measures will lower utility expenses and enhance margins. Early upgrades to equipment and buildings will also reduce future CAPEX requirements by avoiding costly compliance retrofits. In addition, improving energy performance positions Avient to meet evolving regulatory requirements, mitigating compliance costs and supporting long-term value creation.

(3.6.1.15) Are you able to quantify the financial effects of the opportunity?

Select from:

☒ Yes

(3.6.1.21) Anticipated financial effect figure in the long-term - minimum (currency)

5027264

(3.6.1.22) Anticipated financial effect figure in the long-term – maximum (currency)

6368980

(3.6.1.23) Explanation of financial effect figures

Savings from energy efficiency investments are calculated by projecting future investments and savings using IEA's Clean Energy Investment Needs model. Avient spent \$5,510,000 in 2025 on energy efficiency investments, with savings equaling \$1,014,473. Under APS scenario, energy efficiency project spend would increase to \$9,232,624 by 2050, with savings equaling \$5,027,264. IEA models project this spend to increase to \$11,204,415 by 2050 under the NZE scenario, with savings equaling \$6,368,980.

(3.6.1.24) Cost to realize opportunity

5510000

(3.6.1.25) Explanation of cost calculation

Cost of \$5,510,000 calculated based on the reporting year's actual capital expenditures on energy efficiency projects.

(3.6.1.26) Strategy to realize opportunity

Climate related risks influence our operational strategy. For instance, energy costs, their impact represent a substantial part of our manufacturing costs, and emerging regulation changes that counter the adverse effects of climate change can have an important impact on these costs. For this reason, our Energy Management

Committee evaluates risks and opportunities and defines accordingly the most effective strategy. The committee has developed a tool that quantifies project energy savings, return on investment, and impact on corporate goals and objective related to greenhouse gas and energy. Using this tool, coupled with active management of energy use data, Avient has made significant investments in energy efficiency technologies. In 2025, Avient implemented 108 energy saving activities that resulted in 12,303 MWh of annual energy savings.

[Add row]

(3.6.2) Provide the amount and proportion of your financial metrics in the reporting year that are aligned with the substantive effects of environmental opportunities.

Climate change

(3.6.2.1) Financial metric

Select from:

☒ Revenue

(3.6.2.2) Amount of financial metric aligned with opportunities for this environmental issue (unit currency as selected in 1.2)

1232000000

(3.6.2.3) % of total financial metric aligned with opportunities for this environmental issue

Select from:

☒ 31-40%

(3.6.2.4) Explanation of financial figures

Avient's sustainable solutions portfolio helps customers to solve complex sustainability challenges, including enabling the use of more recycled content, or biopolymers, sustainable infrastructure, human health & safety, lightweighting, reducing volatile organic compounds, reducing energy usage, and offering eco-conscious solutions and is a key growth driver to drive profitable, organic sales growth. In 2025, we delivered \$1,071 million in sustainable solutions sales, representing 33% of our overall revenue.

Water

(3.6.2.1) Financial metric

Select from:

☒ CAPEX

(3.6.2.2) Amount of financial metric aligned with opportunities for this environmental issue (unit currency as selected in 1.2)

740000

(3.6.2.3) % of total financial metric aligned with opportunities for this environmental issue

Select from:

☒ 1-10%

(3.6.2.4) Explanation of financial figures

Avient invests in water conservation and efficiency projects; however, because water is not a material aspect of its operations, the company directs a larger portion of its resources toward areas with greater potential environmental impact, including energy efficiency, emissions reduction, and waste minimization.

Select all that apply

☒ Executive directors or equivalent

☒ Independent non-executive directors or equivalent

(4.1.4) Board diversity and inclusion policy

Select from:

☒ Yes, and it is publicly available

(4.1.5) Briefly describe what the policy covers

The corporate governance guidelines, together with the charters of the committees of the Board, provide the framework for the corporate governance of the Company. The guidelines recognize the importance of maintaining the flexibility to adapt corporate governance processes to the changing requirements of the business. They are in addition to and are not intended to change or interpret any federal or state law or regulation, including the laws of the State of Ohio, the Company's Amended and Restated Articles of Incorporation or Regulations, or any committee charter reviewed and approved by the Board. This document outlines the Corporate Governance Guidelines for Avient Corporation, providing a framework for the governance of the company. Key points include: Board Composition and Standards, Director Responsibilities, Policies, Compensation, Orientation and Education, Access to Management and Advisors, and External Communication.

(4.1.6) Attach the policy (optional)

(4.1.2.7) Please explain

Climate Change related issues are the responsibility of Avient's Board of Directors generally and Chairman, President, and CEO specifically. The full Board maintains oversight over climate-related risk management through its committees. This corresponds to internal programs focused on dependencies, impacts, risks and opportunities review, assessment and management, including overseeing and guiding climate-related scenario analysis and public policy engagement. Specifically,

the Innovation and Sustainability Committee and the Governance and Corporate Responsibility Committee assist the full Board in fulfilling its oversight responsibilities relating to corporate responsibility and ESG matters. The Governance and Corporate Responsibility Committee determines the specific roles and responsibilities related to sustainability and ESG (including climate-related issues). The responsibilities of Governance and Corporate Responsibility Committee includes providing oversight and guidance to how the Board and management evaluate/integrate corporate responsibility and sustainability matters into the Company's business strategy and decision-making. This includes receiving regular updates from management regarding climate change strategies, targets and progresses, reviewing and guiding annual incentive program, overseeing and guiding major capital expenditures, reviewing innovation/R&D priorities related to sustainable solutions portfolio and reviewing reports on corporate responsibility and/or sustainability published by the Company. The Innovation and Sustainability Committee oversees management's efforts with respect to research and development activities related to significant new technologies, commercial innovation, and sustainability initiatives to meet the needs of the Company's customers and growth objectives. The Committee achieves this by overseeing and monitoring the implementation and maintenance by management of comprehensive EHS, physical security and product stewardship, sustainability and physical security policies, standards, and practices. It further periodically reviews the Company's sustainability strategies, goals, and initiatives, as well as efforts to ensure compliance with any sustainability disclosure rules and regulations, and periodically reviews the Company's sustainability performance, third-party scoring, and reporting, including an annual review of the Company's Sustainability Report. Additionally, all aspects of acquisitions/divestitures are overseen by the Board Chair and Committees. Finally, all of the above responsibilities are addressed at regular meetings of the Board and its committees and are monitored periodically through performance evaluations of each Board member, Board Committee, and the Board as a whole. In 2024, the Board Chair gave their approval for the company to seek out new Virtual Power Purchase Agreements (VPPAs) and to explore projects involving on-site renewable energy sources. The VPPA is active in 2025.

(4.3.1.6) Please explain

Corporate sustainability and climate-related issues are the responsibility of Avient's highest-level officer, our President and Chief Executive Officer (CEO), who is also a member of the Board of Directors. At Avient, we understand that climate-related issues have the potential to impact our business in a variety of ways. We believe that our CEO, who has direct responsibility and oversight across all functional areas at Avient, is the most appropriate individual to manage and hold people accountable for climate-related issues. The CEO receives monthly updates from management regarding climate change strategies, targets and progresses, as well as reviewing reports on corporate responsibility and/or sustainability published by the Company. Climate change impacts are continually monitored and are an ongoing responsibility of our CEO to oversee on behalf of the company. Our CEO is ultimately accountable to our Board, and our Board also has determined that it has responsibility for overseeing the actions of the CEO (and management) in these areas. Our CEO, as well as our Operating Council, Sustainability Council, and

Board Committees (specifically, our Innovation & Sustainability Committee and our Governance and Corporate Responsibility Committee) are responsible for assessing and managing climate-related issues that fall in these areas.

Corporate sustainability and climate-related issues are the responsibility of Avient's highest-level officer, our President and Chief Executive Officer (CEO), who is also a member of the Board of Directors. At Avient, we understand that climate-related issues have the potential to impact our business in a variety of ways. We believe that our CEO, who has direct responsibility and oversight across all functional areas at Avient, is the most appropriate individual to manage and hold people accountable for climate-related issues. The CEO receives monthly updates from management regarding climate change strategies, targets and progresses, as well as reviewing reports on corporate responsibility and/or sustainability published by the Company. Climate change impacts are continually monitored and are an ongoing responsibility of our CEO to manage on behalf of the company. Our CEO is ultimately accountable to our Board, and our Board also has determined that it has responsibility for overseeing the actions of the CEO (and management) in these areas. Avient continues to define sustainability in regard to the progress we are making in each of our four focus areas: People, Products, Planet, and Performance. Our CEO, as well as our Operating Council, Sustainability Council, and Board and Board Committees (specifically, our Innovation and Sustainability Committee and our Governance and Corporate Responsibility Committee) are responsible for assessing and managing climate-related issues that fall within these pillars.

The VP of Sustainability has direct management oversight of our Sustainability Council which is tasked with enabling sustainable performance through improvements in the areas of energy efficiency, energy procurement, the expanded use of renewables, and waste minimization. This committee is comprised of operational and sourcing leaders from our various regions and ensures continual progress towards our 2030 Sustainability Goals. Climate change-related responsibilities reside with this position because of its responsibility for managing day-to-day execution of sustainability-related strategy and goals. This position is also tasked with ensuring the appropriate elevation of climate-related issues to the CEO, Operating Council, and Board of Directors. The Vice President, Sustainability is responsible to lead initiatives that help us achieve our sustainability goals, including the climate-related goals.

The ultimate goal of our Sustainability Council is to drive sustainable performance aligned with Avient's mission. In 2020, the council formed a Planet Sub-Committee within the Sustainability Council. The overall management strategy for our emission reduction program is led Avient's Planet Sub-Committee of the Sustainability Council. This committee is comprised of global operations and sourcing leaders and ensures continual progress towards our Sustainability Goals and operational efficiency goals. Execution of this strategy is achieved by our business segments working closely with our individual facilities, the EH&S team, and the Planet Sub-Committee.

(4.5) Do you provide monetary incentives for the management of environmental issues, including the attainment of targets?

Climate change

(4.5.1) Provision of monetary incentives related to this environmental issue

Select from:

☒ Yes

(4.5.2) % of total C-suite and board-level monetary incentives linked to the management of this environmental issue

10

(4.5.3) Please explain

In 2025, 10% of the Company's annual incentive bonus for all employees were tied to specific sustainability targets aligned with our sustainability goals.

Water

(4.5.1) Provision of monetary incentives related to this environmental issue

Select from:

☒ No, but we plan to introduce them in the next two years

(4.5.3) Please explain

At Avient, we have traditionally focused our incentive programs on operational areas with a larger environmental footprint, such as energy consumption and landfill waste. Given that our operations are not water-intensive, water-related incentives have not been a priority historically. However, we've recently taken a significant step forward by introducing a 2030 water goal, specifically targeting sites located in extremely high-risk water areas. While this initiative is not currently linked to monetary incentives, it reflects our growing commitment to advancing water stewardship across our operations. As we continue to evolve our sustainability strategy and seek new ways to reduce our environmental impact, we recognize the potential value of incorporating water-related incentives. This is an area we will continue to monitor and explore moving forward.

[Fixed row]

(4.5.1) Provide further details on the monetary incentives provided for the management of environmental issues (do not include the names of individuals).

Climate change

(4.5.1.1) Position entitled to monetary incentive

Board or executive level

- ☒ Corporate executive team

(4.5.1.2) Incentives

Select all that apply

- ☒ Bonus - % of salary

Targets

- ☒ Progress towards environmental targets
- ☒ Organization performance against an environmental sustainability index

Emission reduction

- ☒ Reduction in emissions intensity

Resource use and efficiency

- ☒ Reduction in total energy consumption
- ☒ Other resource use and efficiency-related metrics, please specify :Reduction achieved in waste to landfill intensity and energy intensity

(4.5.1.4) Incentive plan the incentives are linked to

Select from:

- ☒ Short-Term Incentive Plan, or equivalent, only (e.g. contractual annual bonus)

(4.5.1.5) Further details of incentives

10% of the Company's annual incentive bonus was tied to specific sustainability targets aligned with Avient's sustainability goals/ metrics for all employees including Named Executive Officers (NEOs) under the Annual Incentive Program.

(4.5.1.6) How the position's incentives contribute to the achievement of your environmental commitments and/or climate transition plan

The payouts under the 2025 Annual Incentive Program were based on attainment with respect to target and goals set for each financial performance measure and with respect to the sustainability metrics. The metrics that are tracked considers both reduction in waste to landfill intensity (Kg / MT Sales) and energy intensity (MWH / MT Sales). This is in line with Avient's 2030 Sustainability goal to reduce Scope 1 & 2 greenhouse gas (GHG) emissions by 55% and reduce total waste to landfill by 2.5% year over year. Both these targets form a part of Avient's climate transition plan.

(4.10) Are you a signatory or member of any environmental collaborative frameworks or initiatives?

(4.10.1) Are you a signatory or member of any environmental collaborative frameworks or initiatives?

Select from:

☒ Yes

(4.10.2) Collaborative framework or initiative

Select all that apply

☒ Global Reporting Initiative (GRI) Community Member

☒ RE100

☒ Task Force on Climate-related Financial Disclosures (TCFD)

☒ UN Global Compact

☒ Other, please specify :Operation Clean Sweep, UN SDG, Responsible Care, RC14001, ISO14001, ISO5001, US Department of Energy Better Plants Program

(4.10.3) Describe your organization's role within each framework or initiative

RE 100: Avient is a member of the RE100 initiative, committed to achieving 60% renewable electricity by 2030 and 100% by 2050. Task Force on Climate-related Financial Disclosures (TCFD)- Avient publishes annual Sustainability Report which addresses Avient's alignment to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). UN Global Compact- Avient is a signatory of the United Nations Global Compact (UNGC) and committed to align its operations and strategies with ten universally accepted principles in the areas of human rights, labor, environment and anti-corruption and take action in support of

the Sustainable Development Goals (SDGs). Global Reporting Initiative (GRI)- Avient publishes annual Sustainability Report which is in accordance with the GRI Sustainability Reporting standards. Better plant program: In 2023, Avient joined the U.S. Department of Energy's Better Plants Program. By aligning with Better Plants, Avient has pledged to reduce energy intensity by 25% over the next 10 years, demonstrating its dedication to sustainable practices and bolstering its competitiveness in the industry. Operation Clean Sweep: Avient's is a supporter of Operation Clean Sweep whose overarching goal is to ensure that every plastic resin handling operation achieves zero loss of pellet, flake, and powder. UN SDG- Avient aligns its sustainability goals and business models with five sustainable development goals, i.e. SDG 3- Good Health and Well-being, SDG 7- Affordable and Clean Energy, SDG 9- Industry, Innovation and Infrastructure, SDG 12- Responsible Consumption and Production and SDG 13- Climate Action Third-party management system- Avient employs several third-party management system e.g. Responsible Care, RC14001, ISO14001, ISO5001 etc. to drive continuous improvement in EHS&S related performance.

☒ No, we did not attempt to influence their position

(4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

The American Chemistry Council (ACC) recognizes that the industry must work together to develop effective solutions that will reduce greenhouse gas (GHG) emissions. The ACC is exploring, developing, and deploying technologies to reduce its own emissions. These include carbon capture, utilization and storage (CCUS); lower-emission hydrogen, steam, and electricity; the use of biomaterials and circular feedstocks instead of virgin materials; cracker electrification; and industrial energy efficiency programs. Further, ACC encourages Congress, regulatory agencies, states, and standard-setting bodies to enact policies that will help create a lower-emissions future. Avient is fully aligned with the ACC's position on climate.

(4.11.2.9) Funding figure your organization provided to this organization or individual in the reporting year (currency)

86876

(4.11.2.10) Describe the aim of this funding and how it could influence policy, law or regulation that may impact the environment

Avient pays an annual membership fee to American Chemistry Council (ACC). It provides Avient the access to a forum for education and a venue to work collaboratively with ACC, collaborate with industry partners and protect and advance our industry's common interests at all levels of government and across the marketplace. ACC is the leading advocacy association representing the business of American chemistry and committed to driving innovation in our industry, economy, environment and society. As a member of the American Chemistry Council, Avient has also adopted Responsible Care Guiding Principles and the Process Safety Management Practices to guide our efforts in continuous improvement in health and safety performance.

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

Avient reviewed publicly available and widely accepted climate transition scenarios to identify the most appropriate options for the climate change scenario analysis. The scenarios chosen are based on the International Energy Agency's World Energy Outlook 2024 (IEA WEO) analysis of climate impacts under different levels of future emissions and global average temperatures. Three different climate scenarios were identified. Parameters used in the Net Zero Emissions (NZE) 2050 scenario included measurable factors that may have a financial impact on Avient's business, including worldwide crude oil price, CO₂ prices across advanced, emerging and developing economies, natural gas prices and renewable electricity prices. Demographic metrics such as GDP and population growth in different regions were also considered. Additionally, annual investment in electrification, energy efficiency and energy generation technologies in the short- to long-term time horizon were considered in the scenario planning. Assumptions made in using the NZE 2050 scenario include anticipated policy results achieved in the short- to long-term time horizon affecting the electricity and heat, industry, buildings, transport and other sectors across the period of 2025 to 2050. Economic activity in reference to private and public capital is assumed to continue mobilizing toward renewable energy investment, supported by a globally stringent regulatory policy landscape. It is assumed that plastics demand will continue to increase alongside rising recycling rates, while oil prices will gradually decline due to lower demand. Uncertainties include the pace and completeness of policy implementation, the potential for divergence in regional market behavior, and variability in commodity price trajectories. Constraints on the analysis included reliance on external IEA data that may not fully capture sector- or region-specific nuances, limited availability of site-level operational and financial data, and internal capacity constraints that resulted in a primarily qualitative analysis with some quantitative aspects, focused on direct operations with limited evaluation of value chain partners.

(5.1.1.11) Rationale for choice of scenario

The rationale for selecting the particular scenario for our analysis is multifaceted. Firstly, the scenario is publicly available and updated annually, ensuring that the data is current and accessible. Its widespread reference and usage across industries make it a standard for benchmarking, allowing for meaningful comparisons with our peer companies. The scenario provides a rich array of both qualitative and quantitative data, which is particularly pertinent for a manufacturing entity like ours that is a heavy energy user. The heavy energy focus of the scenario is relevant to understanding the impact on key commodities that are critical to our operations. To facilitate a comprehensive comparison, a minimum of three scenarios were chosen, each aligned with different temperature projections, ranging from aggressive to conservative. This selection enables us to evaluate the potential impacts across a spectrum of future conditions. The International Sustainability Standards Board (ISSB) IFRS S2 offers guidance on scenario analysis, which we have followed in making our selection to ensure a robust and informed scenario planning process.

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

The tool presumes that modeled climate, socioeconomic, and hydrological datasets accurately represent future conditions, though actual outcomes may vary. It also assumes uniform applicability across our global sites, which may not fully capture local or site-specific dynamics. Uncertainties arise from long-term climate projections, evolving regulatory frameworks, and potential changes in community water use, all of which could impact future risk levels differently than modeled.

(5.1.1.11) Rationale for choice of scenario

Avient uses the World Resources Institute's (WRI) Aqueduct Tool as part of its water-related scenario analysis to evaluate potential future risks and opportunities across its operations. The tool provides insights into projected water stress, regulatory pressures, and reputational considerations under various climate and socioeconomic scenarios. By incorporating these projections into its assessment process, Avient can identify sites that may be exposed to elevated water-related risks, evaluate the resilience of its operations, and inform long-term water stewardship and risk management strategies.

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

Avient reviewed publicly available and widely accepted climate transition scenarios to identify the most appropriate options for the climate change scenario analysis. The scenarios chosen are based on the International Energy Agency's World Energy Outlook 2024 (IEA WEO) analysis of climate impacts under different levels of future emissions and global average temperatures. Three different climate scenarios were identified. Parameters used in the Announced Pledges Scenario (APS) included measurable factors that may have a financial impact on Avient's business. These included worldwide crude oil price, CO₂ prices across advanced, emerging and developing economies, natural gas prices and renewable electricity prices. Demographic metrics such as GDP and population growth in different regions were also considered. Additionally, annual investment in electrification, energy efficiency and energy generation technologies in the short- to long-term time horizon were considered in the scenario planning. Assumptions made in use of the APS include anticipated policy results achieved in different regions in the short- to long-term time horizon affecting the power, industry, buildings, transport and other sectors across the period of 2025 to 2050. If national pledges are kept as hypothetically implemented, the regulatory landscape will be stringent, though achieving a 1.7°C pathway will depend on numerous nuanced economic and geopolitical factors. Market dynamics assume rising demand but inconsistent elasticity for renewable content, which may create difficulty in projecting future pricing. Plastics demand is expected to continue increasing while recycling rates rise only gradually, and oil pricing is projected to decline at a slower rate as demand eases. Uncertainties include the pace and completeness of policy implementation, the potential for divergence in regional market behavior, and variability in commodity price trajectories. Constraints on the analysis included reliance on external IEA data that may not fully capture sector- or region-specific nuances, limited availability of site-level operational and financial data, and internal capacity constraints that resulted in a primarily qualitative analysis with some quantitative aspects, focused on direct operations with limited evaluation of value chain partners.

(5.1.1.11) Rationale for choice of scenario

The rationale for selecting the particular scenario for our analysis is multifaceted. Firstly, the scenario is publicly available and updated annually, ensuring that the data is current and accessible. Its widespread reference and usage across industries make it a standard for benchmarking, allowing for meaningful comparisons with our peer companies. The scenario provides a rich array of both qualitative and quantitative data, which is particularly pertinent for a manufacturing entity like ours that is a heavy energy user. The heavy energy focus of the scenario is relevant to understanding the impact on key commodities that are critical to our operations. To facilitate a comprehensive comparison, a minimum of three scenarios were chosen, each aligned with different temperature projections, ranging from aggressive to

conservative. This selection enables us to evaluate the potential impacts across a spectrum of future conditions. The International Sustainability Standards Board (ISSB) IFRS S2 offers guidance on scenario analysis, which we have followed in making our selection to ensure a robust and informed scenario planning process.

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

Avient reviewed publicly available and widely accepted climate transition scenarios to identify the most appropriate options for the climate change scenario analysis. The scenarios chosen are based on the International Energy Agency's World Energy Outlook 2024 (IEA WEO) analysis of climate impacts under different levels of future emissions and global average temperatures. Three different climate scenarios were identified. Parameters used in the IEA STEPS (Stated Policies Scenario) included measurable factors that may have a financial impact on Avient's business. These included worldwide crude oil price, CO₂ prices in the USA, EU countries, China, Canada, Chile and Colombia, natural gas prices and renewable electricity prices. Demographic metrics such as GDP and population growth in different regions were also considered. Additionally, annual investment in electrification, energy efficiency and energy generation technologies in the short- to long-term time horizon were considered in the scenario planning. Assumptions made in use of the STEPS include anticipated policy results achieved in different regions in the short- to long-term time horizon affecting the power, industry, buildings, transport and other sectors across the period of 2025 to 2050. Because most stated and implemented goals are concentrated in developed nations and large economies, longer-term projections under this scenario are more uncertain and difficult to hypothesize, given the inability to fully account for smaller macro- and microeconomic forces that could influence whether global temperature rise is limited to below 2.5°C. Market dynamics assume plastics demand will continue to increase exponentially as recycling rates rise only slowly, while oil pricing remains roughly consistent with present-day levels due to stable demand. Uncertainties include the pace and completeness of policy implementation, the potential for divergence in regional market behavior, and variability in commodity price trajectories. Constraints on the analysis included reliance on external IEA data that may not fully capture sector- or region-specific nuances, limited availability of site-level operational and financial data, and internal capacity constraints that resulted in a primarily qualitative analysis with some quantitative aspects, focused on direct operations with limited evaluation of value chain partners.

(5.1.1.11) Rationale for choice of scenario

The rationale for selecting the particular scenario for our analysis is multifaceted. Firstly, the scenario is publicly available and updated annually, ensuring that the data is current and accessible. Its widespread reference and usage across industries make it a standard for benchmarking, allowing for meaningful comparisons with our peer companies. The scenario provides a rich array of both qualitative and quantitative data, which is particularly pertinent for a manufacturing entity like ours that is a heavy energy user. (5.1.1.10) Assumptions, uncertainties and constraints in scenario

Avient reviewed publicly available and widely accepted physical climate scenarios to identify the most appropriate options for the climate change scenario analysis. The scenarios chosen for physical climate-related risk scenario analysis are low and high based on the RCP 2.6 and RCP 8.5 scenarios. Climate information available on our climate hazard platform reflects the current state of scientific knowledge on climate. Some uncertainties in the climate models are known and are factored into the platform in terms of confidence levels. Confidence level (low, medium, high) provides a sense of how certain the future trend of a climate indicator is. The higher the confidence level, the more certain the future trend is. Confidence level is based (1) on the level of agreement between different climate models and (2) on the level of statistical significance of the temporal signal between a future and a reference period, according to the IPCC AR6 WGI (2021) definition. The underlying datasets used for this scenario analysis have a spatial accuracy ranging from 25 km to 30 m depending on the climate indicators assessed. These constraints and uncertainties are considered when interpreting results under the RCP 2.6 scenario, which represents a best-case pathway assuming significant and immediate global action to mitigate physical climate risks. The analysis using this scenario was mainly quantitative in nature covering 119 direct manufacturing operations along with several high criticality sites, suppliers and customer sites across different regions.

(5.1.1.11) Rationale for choice of scenario

Avient reviewed publicly available and widely accepted physical climate scenarios to identify the most appropriate options for the climate change scenario analysis. The scenarios chosen for physical climate-related risk scenario analysis are low and high based on the RCP 2.6 and RCP 8.5 scenarios. These scenarios enable Avient to evaluate both qualitative and quantitative impact of acute (drought, heavy precipitation, heatwaves etc.) and chronic (changing wind patterns, heat stress, sea level rise etc.) physical climate risks.

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

Avient reviewed publicly available and widely accepted physical climate scenarios to identify the most appropriate options for the climate change scenario analysis. The scenarios chosen for physical climate-related risk scenario analysis are low and high based on the RCP 2.6 and RCP 8.5 scenarios. Climate information available on our climate hazard platform reflects the current state of scientific knowledge on climate. Some uncertainties in the climate models are known and are factored into the platform in terms of confidence levels. Confidence level (low, medium, high) provides a sense of how certain the future trend of a climate indicator is. The higher the confidence level, the more certain the future trend is. Confidence level is based (1) on the level of agreement between different climate models and (2) on the level of statistical significance of the temporal signal between a future and a reference period, according to the IPCC AR6 WGI (2021) definition. The underlying datasets used for this scenario analysis have a spatial accuracy ranging from 25 km to 30 m depending on the climate indicators assessed. When a site is identified as a "hot spot" with regard to a climate hazard, it is recommended that a complementary local study be carried out before considering any significant adaptation investment. For example, in the case of coastal flooding, there is no global dataset accounting for dike or sea wall systems, and a local study may confirm that an exposed site is in fact protected. These constraints and uncertainties are considered when interpreting results under the RCP 8.5 scenario, which represents a worst-case pathway assuming continued growth in greenhouse gas emissions and associated escalation in physical climate risks. The analysis using this scenario was mainly quantitative in nature covering 102 direct manufacturing operations along with several high criticality sites, suppliers and customer sites across different regions.

(5.1.1.11) Rationale for choice of scenario

Avient reviewed publicly available and widely accepted physical climate scenarios to identify the most appropriate options for the climate change scenario analysis. The scenarios chosen for physical climate-related risk scenario analysis are low and high based on the RCP 2.6 and RCP 8.5 scenarios. These scenarios enable Avient to evaluate both qualitative and quantitative impact of acute (drought, heavy precipitation, heatwaves etc.) and chronic (changing wind patterns, heat stress, sea level rise etc.) physical climate risks.

- ☒ Changes to the state of nature
- ☒ Speed of change (to state of nature and/or ecosystem services)
- ☒ Climate change (one of five drivers of nature change)

Stakeholder and customer demands

- ☒ Impact of nature service delivery on consumer

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

The approach was carried out utilizing a third-party consultant. They focused on a select number of our sites to determine future risks, presuming that modeled climate, socioeconomic, and hydrological datasets accurately represent future conditions. The modeling also assumes uniform applicability across our global sites, which may not fully capture local or site-specific dynamics. Uncertainties arise from long-term climate projections, evolving regulatory frameworks, and potential changes in community water use, all of which could impact future risk levels differently than modeled.

(5.1.1.11) Rationale for choice of scenario

The third party consultant utilized the World Resource Institute's Aqueduct tool and their own analysis to evaluate potential future-related risks and opportunities across our operations. The analysis provided us with an in-depth look at potential areas for concern depending on location, severity of concern, and vulnerability levels. Incorporating this data allows us to identify vulnerable sites, test the resilience of our strategy, and strengthen long-term water stewardship planning.

[Add row]

(5.1.2) Provide details of the outcomes of your organization's scenario analysis.

Climate change

(5.1.2.1) Business processes influenced by your analysis of the reported scenarios

Select all that apply

- ☒ Risk and opportunities identification, assessment and management
- ☒ Strategy and financial planning
- ☒ Resilience of business model and strategy
- ☒ Capacity building

- ☒ Target setting and transition planning

(5.1.2.2) Coverage of analysis

Select from:

- ☒ Organization-wide

(5.1.2.3) Summarize the influence of the scenario analysis on the selected business processes

The analysis helped us get an improved understanding of the impact and business implications of different climate scenarios due to new climate policies, increased carbon pricing exposures, market pressures, technological advancements, direct damages and indirect disruption associated with severe changes in climate driven by weather events. The analysis identified market pressure risk as a priority risk for Avient's success in the short and medium term and validated the resilience of Avient's climate strategy with existing sustainability goals around sustainable solutions portfolio and positioning to capture enhanced market share over expanding and emerging needs of innovative and low-emissions materials which is instrumental in the global low-carbon transition. As an outcome of the physical climate-related scenario analysis process, Avient identified several acute (drought, heavy precipitation, heatwaves etc.) and chronic (changing wind patterns, heat stress, sea level rise etc.) physical risks that Avient's highest insured sites are exposed to. For example, 14 Avient sites are identified to have largest exposure to changes in extreme precipitation in the medium (by 2030) to long term time-horizon (by 2050) based on net revenue and asset value exposure. Avient also modified the approach of Enterprise Risk Management process to include and assess site-level physical climate-related risks assessment at high-value facilities (facilities which may have financial material impact to Avient's business). As an outcome, Avient assessed its facilities which are located within high/severe water stressed regions based on the WRI Aqueduct tool and identified the sites which are most exposed to water-related risks. Though the sites are not water intense, such outcomes are relevant from both an operational and risk management perspective, and therefore, are also factored in the business planning. These sites are currently developing site-specific mitigation actions including water conservation programs.

Water

(5.1.2.1) Business processes influenced by your analysis of the reported scenarios

Select all that apply

- ☒ Risk and opportunities identification, assessment and management
- ☒ Strategy and financial planning
- ☒ Resilience of business model and strategy
- ☒ Capacity building
- ☒ Target setting and transition planning

(5.1.2.2) Coverage of analysis

Select from:

☒ Organization-wide

(5.1.2.3) Summarize the influence of the scenario analysis on the selected business processes

The analysis helped us get an improved understanding of the impact and business implications of different scenarios due to new policies, increased regulations, market pressures, technological advancements, direct damages and indirect disruption associated with severe changes in accessibility. From this analysis, we are able to determine what the current scope of our risk levels are and where we should be allocating resources to. It likewise played a factor in the implementation of our new water goal.

[Fixed row]

(5.2) Does your organization's strategy include a climate transition plan?

(5.2.1) Transition plan

Select from:

☒ Yes, but we have a climate transition plan with a different temperature alignment

(5.2.2) Temperature alignment of transition plan

Select from:

☒ Well-below 2°C aligned

(5.2.3) Publicly available climate transition plan

Select from:

☒ Yes

(5.2.4) Plan explicitly commits to cease all spending on, and revenue generation from, activities that contribute to fossil fuel expansion

Select from:

☒ No, and we do not plan to add an explicit commitment within the next two years

(5.2.6) Explain why your organization does not explicitly commit to cease all spending on and revenue generation from activities that contribute to fossil fuel expansion

Avient is a leading innovator of specialized and sustainable material solutions, committed to enabling sustainable solutions for the markets that we participate in. We innovate products and technologies that enable climate solutions. For example, our solutions are used to create renewables (e.g., wind turbines, solar panels), EVs and EV infrastructure, lightweight vehicle, plane, and train parts, high-performance building materials, advanced battery storage, composite materials, and many more that enables lower greenhouse gas emissions in a range of industries and sectors. The focus of our innovation efforts is on ultimately reducing the amount of fossil fuels needed in end products by advancing a circular economy, developing more sustainable alternative products, and reducing the carbon footprint of our technologies or our customers' products. Our circular economy solutions include technologies that enable high recycle content, make products more recyclable, use bio renewable polymers as base, decrease the amount of plastics needed to make the same product, and even lower the energy to make end products for our customers. Our proven ability to innovate materials enables our customers to achieve their sustainability goals which remains a key differentiator for our company. We have commitments in our own operations to lower our greenhouse gases by 55% by 2030 and increase our electricity renewable energy to 60% and have achieved those goals in 2025 ahead of schedule (55% reduction in scope 1 and 2 emissions and sourced 62% of electricity from renewables). As the world continues to shift from operating in a linear economy to a circular economy, and reducing greenhouse gas emissions continues to be a focal point, Avient is proud to be a part of the solution. Our internal operations and our innovation goals demonstrate our commitment to sustainability and reducing carbon emissions from fossil fuels.

(5.2.10) Mechanism by which feedback is collected from shareholders on your climate transition plan

Select from:

☒ We have a different feedback mechanism in place

(5.2.11) Description of feedback mechanism

Avient's feedback mechanisms strive to be transparent, inclusive, and actionable. They include: 1. Annual Sustainability Report with detailed disclosures on the company's progress, challenges, and future plans related to carbon reduction and sustainability. TCFD, SASB, & GRI frameworks are used to structure the report. It includes specific metrics, targets, and timelines for carbon reduction, and explains how these align with the company's broader financial and operational strategy. 2. Stockholder meetings and Q&A sessions where time is allocated to discuss the topic of sustainability. These meetings include interactive Q&A sessions to allow stockholders to ask questions and provide feedback on the company's sustainability initiatives and ensure that senior leadership, including the CEO, CFO, & General Counsel is available to respond. 3. Board of Directors Committees as discussed in the Governance section of this Report 4. Digital platforms for continuous engagement have been leveraged so stockholders can access updates, submit feedback, and engage in discussions about the company's carbon transition efforts. These platforms are also used to host forums and regular updates on progress, allowing for continuous, rather than just periodic, feedback. 5. Articles of incorporation and corporate code of regulations allow stockholders to submit resolutions related to the carbon transition plan for a vote at the Annual Meeting of Shareholders. This serves as a formal way for stockholders to influence the company's strategy. 6. Independent third-party reviews of greenhouse gas emission performance validate the company's progress toward meeting our goals and the effectiveness of our strategies. Results of these independent reviews are published and inform subsequent strategy updates. 7. Response to feedback clearly communicates what actions will be taken in response. This is done through emails, the company website, or follow-

up meetings. This also includes regular updates to stockholders on the progress made in areas they highlighted, showing that their input is leading to tangible results. 8. In 2023, Avient hosted a Sustainability Day to educate shareholders on the company's focus areas and strategies for sustainable material solutions, a critical component of the low carbon transition plan.

(5.2.12) Frequency of feedback collection

Select from:

☒ More frequently than annually

(5.2.13) Description of key assumptions and dependencies on which the transition plan relies

Avient's climate transition plan relies on the outcome of comprehensive risk assessment that includes both impact and aspect assessment following the RC 14001 management system. The plan integrates insights from the Climate Scenario Analysis, which is integral to the assessment process. This approach guarantees that the transition plan remains flexible and responsive to evolving risk scenarios, ensuring alignment with strategic scenario planning for a robust climate response.

(5.2.14) Description of progress against transition plan disclosed in current or previous reporting period

Avient's climate transition plan is a multifaceted strategy aimed at reducing greenhouse gas emissions in alignment with international standards like the Paris Agreement, with a goal of achieving operational carbon neutrality by 2050. The plan includes a detailed assessment of emissions, the establishment of measurable reduction targets, and a robust action plan encompassing energy efficiency, renewable energy adoption, and business operation changes. Governance structures ensure accountability, while risk management and financial planning address potential climate-related challenges and investments. Stakeholder engagement and transparent reporting keep all parties informed and involved. The plan also emphasizes innovation, employee training, and policy advocacy to support a sustainable, low-carbon future. In support of this climate transition, Avient has focused its continuous improvement efforts on: (i) Investing in resources and existing technologies to optimize operations, including improvements in energy efficiency and waste reduction (ii) Maximizing the use of renewable energy in our operations (iii) Adopting new technologies in our global network of facilities (iv) Continuing to develop new and innovative products that have sustainability attributes that decrease GHG emissions and enable the world's transition to a lower-carbon economy (v) Advancing circularity in our operations and our customers' products and (vi) Partnering with our suppliers to enhance the eco-efficiency of our supply chain. In the reporting year, Avient made strong progress in reducing company's Scope 1 & 2 GHG emissions, reaching 55% reduction against the base year 2019, and met this renewable energy goal by reaching 62% electricity being from renewable sources by leveraging virtual power purchase agreements among other sourcing initiatives. Avient is also partnering with the U.S. Department of Energy's Better Plants Program. By aligning with Better Plants, Avient has pledged to reduce energy intensity by 25%. Avient utilizes findings from the company's Enterprise Risk Management system to continuously identify and monitor our management of the physical risks associated with climate change including extreme weather events, supply chain disruptions, and technology changes, as well as transitional climate risks associated with legal, regulatory, policy, low carbon energy transition and liability issues. We additionally expanded our existing risk management practices to incorporate the analysis of short to long-term climate-related risks and opportunities under various climate scenarios.

☒ No

(5.2.20) Primary reason for not having a climate transition plan that aligns with a 1.5°C world

Select from:

☒ Not an immediate strategic priority

(5.2.21) Explain why your organization does not have a climate transition plan that aligns with a 1.5°C world

Beyond our stated 2030 GHG and renewable energy goals, we are dedicated to our operations being carbon neutral by 2050. We know that this will take a lot of work and since 2050 is just around the corner, rapid action and accountability is needed. To drive progress toward carbon neutrality, Avient's low carbon transition plan targets intermediated (2030) goals around Scope 1 (direct) and Scope 2 (indirect) sources of greenhouse gas emissions. These targets are in line with prevailing climate science limits that keep global warming well below 1.5 degrees as detailed by the Paris Agreement and the Science-Based Target Initiative (SBTi), however these are not validated by the Science Based Targets initiative. In 2022, Avient also began a thorough analyses into our Scope 3 emissions to comprehensively understand our Scope 3 footprint and developing a strategy to improve the accuracy of our Scope 3 values along with our ability to take action and track progress toward future emissions reduction goals that is climate science aligned. In 2025, Avient initiated a targeted assessment of suppliers making up 80% of our raw material purchase by volume. Furthermore, Avient also established the cost of carbon at 54.58 per ton CO2 to encourage investments in low-carbon and carbon-free technologies. This price is within the ranges of the scenarios we use for assessing climate-related transition risks e.g. emerging carbon pricing regulations.

[Fixed row]

(5.3) Have environmental risks and opportunities affected your strategy and/or financial planning?

(5.3.1) Environmental risks and/or opportunities have affected your strategy and/or financial planning

- ☒ Water

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Avient's vision is to be an innovator of materials and processing solutions to solve tough customer challenges while enabling a sustainable world. We have identified that sustainability and climate-related risks are a key material impact for our customers, and seek product and service solutions to help them meet their goals. Avient has identified both climate-related risks and opportunities and developed market strategies to help customers meet their sustainability goals, including to reduce their carbon footprint. We have developed strategies to partner with our customers to help them reduce their carbon footprint by offering innovative low carbon footprint technologies, reducing the energy to manufacture their products, enable the use of more recycle materials or bio-materials in their products to enable a circular economy, or to reduce the carbon emissions of their end product by lightweighting (like vehicle fuel efficiency improvement). We additionally support customers developing sustainable infrastructure like solar panels or windmills that supports additional renewable energy on the grid. Our position in enabling the use of recycled

materials, bio-renewable solutions, renewable energy, or energy reductions requires manufacturing in a manner and light weighting of transportation vehicles so that they contribute to more efficient value chains and accelerate lower-carbon transitions for our customers. We have categorized our portfolio of solutions and services into three drivers of sustainability—RENEW, REDUCE and PRESERVE. In a NZE world, we expect growing demand for bio-based and recyclable polymers, lightweight materials that improve energy efficiency in automotive and aerospace applications, and additives and colorants that enhance recyclability and support circularity. Organization-specific example: As an example, within our REDUCE portfolio, Avient developed Dyneema Woven Composites to help customers replace heavier, less durable alternatives. This technology utilizes an ultra-high molecular weight polyethylene that bonds an ultra-lightweight woven face fabric to the original Dyneema core. This enables up to a 20% weight reduction while bringing unprecedented levels of abrasion resistance for long-lasting performance.

Upstream/downstream value chain

(5.3.1.1) Effect type

Select all that apply

- ☒ Physical risks
- ☒ Transition risks
- ☒ Opportunities

(5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area

Select all that apply

- ☒ Climate change

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Climate-related risks and opportunities associated with upstream and downstream stakeholders have influenced our strategy in the following ways: Avient's Supplier Code of Conduct sets clear expectations for upstream business partners in the areas of environmental and climate performance. Performance against these expectations is assessed via self ESG assessment (EcoVadis & Resilinc) and third-party reviews of management systems in place. Feedback and action plans are developed where necessary. Avient actively partners with downstream stakeholders to ensure that our operations, and the polymer solutions we bring to them, facilitate their success in managing climate-related risks important to them. We have also established a product carbon footprint team that focuses on providing product-specific carbon footprint (PCF) metrics to downstream customers based on where and how the product is manufactured. Organization-specific example: Avient is an active "CDP Supply Chain Partner" and regularly interacts through our commercial organization to ensure customer success and assesses supplier performance on climate-related indicators yearly and creates action plans over short and medium timeframes. Through the Sustainable Sourcing Program, Avient provides training on and evaluation of our suppliers on environmental, social, and governance requirements, per the UN Global Compact principles. We partnered with EcoVadis and Resilinc in order to complete these assessments. In 2025, Avient maintained sustainability assessments for key suppliers representing 80% of Avient's direct raw material spend. Of those collected, 66% of the suppliers reported an EcoVadis medal rating in their overall scorecard evaluation. Additionally, Avient's self-assessments, based on ISO 9001/IATF 16949, are requested of suppliers in order to provide insight into the core components of their Quality Management Systems (QMS) and subsequently used as approval criteria for Avient's most sensitive end applications. We have established a methodology to

standardize our approach to calculating PCF. This methodology was developed in accordance with ISO 14067:2018 for product carbon footprint and is aligned with ISO 14040/140440 for life cycle analysis. We have received third party certification from TÜV Rheinland. We continue to partner with Carbon Minds as well as our supply chain to generate the data. In 2025 Avient completed over 2,600 product carbon footprint calculations for customers globally. We are working towards a goal to fully automate this process and expand the PCF data available for the Avient portfolio.

Investment in R&D

Select all that apply

☒ Transition risks

(5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area

Select all that apply

☒ Climate change

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Climate related risks and opportunities associated with upstream and downstream stakeholders have influenced and enabled our innovation strategy through continued investment in R&D to innovate the future material science needs of our customers. Avient's Supplier Code of Conduct sets clear expectations for upstream business partners in the areas of environmental and climate performance. Performance against these expectations is assessed via third party reviews of management systems in place. Feedback and action plans are developed where necessary. In addition, we collaborate across the value chain from suppliers to converters and brand owners to enable our customers to meet their sustainability goals with solutions including reduced carbon footprint technologies, improved recyclability, increased recycle content, and bio-derived solutions. Avient is actively engaged with industry alliances and consortiums to identify solutions for advancing a circular economy that reduces the carbon footprint of plastics. Avient maintains an R&D stage gate process for new developments and currently a majority of our technology projects support sustainable and carbon footprint related projects. Avient actively partners with downstream stakeholders to ensure that our operations, and the polymer solutions we bring to them, facilitate their success in managing climate-related risks important to them. Organization-specific example: Avient has developed a suite of services to enable customers to select lower carbon footprint materials. The Product Carbon Footprint (PCF) calculator tool is now available for use throughout the product development process, providing customers with PCF data for development grades of material (as needed) to enable them to use carbon emissions as a factor in the material selection process. Avient's CycleWorks facility in Poliagno, Italy supports lab scale testing and evaluations of materials throughout the recycling process, allowing Avient to provide customers with a materials solutions portfolio that is essentially field tested for recycling. The PCR Color Prediction Service is a digital tool to enable the use of post-consumer recycled (PCR) content. The tool optimizes the ratio of virgin resin to PCR, in order to achieve the best acceptable color rendering, helping to shorten the time-to-launch of new product ranges, allowing fast and reliable checks prior to initiating sample development. Timeframe: Avient assesses supplier performance on climate-related indicators yearly and creates action plans over short and medium timeframes.

Operations

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Climate related risks influence our operational strategy. For instance, energy costs, their impact on manufacturing costs, and emerging regulation changes that counter the adverse effects of climate change can have an important impact. For this reason, our Energy Management Committee evaluates risks and opportunities and defines accordingly the most effective strategy. This strategy then translates into concrete initiatives: Avient actively manages its energy use and have made significant investments in energy efficiency technologies, renewable energy projects, and signed a 46.2 MW vPPA in Europe 2025. Avient also established the cost of carbon, which started at 54.58 per ton CO2 in 2022 and increases at a rate of 3.8% annually and ends with a carbon price of 72.97 in 2030. The tool encourages investments in low-carbon and carbon-free technologies within operations while increasing the visibility of, and encouraging accountability for, the impact of carbon emissions on the business. This price range is within the scenarios we use for assessing climate-related transition risks e.g. emerging carbon pricing regulations. Organization-specific example: Avient implemented 108 energy saving activities in 2025 that resulting in 12,803 MWh annual energy savings and avoiding annual emissions of approximately 9,242 MT CO2e, hence reducing the company exposure to commodity fluctuations and regulatory changes.

(5.3.2.3) Environmental issues relevant to the risks and/or opportunities that have affected these financial planning elements

Select all that apply

- ☒ Climate change

(5.3.2.4) Describe how environmental risks and/or opportunities have affected these financial planning elements

As Avient operates globally with manufacturing sites and distribution facilities in North America, South America, Europe and Asia. For this reason, we must deal with diverse and complex energy markets that present many risks and opportunities. To manage such aspects, the Energy Management Committee has partnered with a global specialist in energy management, that enables a holistic approach that maximizes benefits while mitigating risks. This partnership enables a more robust budgeting and financial planning cycle, a more strategic sourcing of options (pure commodity sourcing and GOs among others) while leveraging to advance risk management solutions to address the challenges of an ever volatile and changeable environment, such as any legislative changes (opportunities & threats linked to carbon taxes for instance) that may threaten our portfolio. An example of a direct result of this integrated process, to help reduce consumption from non-renewable energy sources, Avient has signed a 46.2 MW Virtual Power Purchase Agreement (VPPA) in Europe in 2025. This agreement is equal to approximately 95% of our annual European electricity needs. We continue to explore similar opportunities to decarbonize across our global operations. Time horizon covered by the financial planning process for Direct Costs: short term to 5 years out.

- ☒ Transition risks
- ☒ Opportunities

(5.3.2.3) Environmental issues relevant to the risks and/or opportunities that have affected these financial planning elements

Select all that apply

- ☒ Climate change

(5.3.2.4) Describe how environmental risks and/or opportunities have affected these financial planning elements

In Avient when we evaluate Capital expenditure decisions, we classify the investment opportunity in three main categories: quality, productivity and Environmental Health and Safety (EHS). To differentiate between different options and further support investments in clean and lower-carbon solutions even when they do not present the most attractive returns, we give a higher weighting factors to EHS projects that ultimately improve overall scores and prioritize them in our investment decision matrix. In 2025, Avient invested over \$5.51M in energy efficiency projects, \$1.51M in waste optimization, and \$740K in water saving activities. As a direct result of this, we have implemented in 2025 108 energy saving and 80 waste minimization projects that cumulatively reduces yearly carbon emissions by nearly 6,588 MT CO2e. Each year more projects are screened and implemented. Time horizon covered by the financial planning process for Capital Expenditures: short term to 5 years out.

Select all that apply

☒ Climate change

(5.3.2.4) Describe how environmental risks and/or opportunities have affected these financial planning elements

Climate-related risks and opportunities have influenced Avient's access to Capital. Together with consumer preferences shifting towards more sustainable products, investors are seeking to increase their investment in companies providing low-carbon and climate resilient goods and services. A lack of response to climate change-related issues could create a risk for our business and threaten our access to capital. For this reason, Avient is committed to improve climate-related issues management at a corporate level and reducing emissions beyond business-as-usual scenario. As part of this effort, Avient issued its first Sustainability Report in 2019 and yearly thereafter to highlight the contributions we're making in the areas of sustainability. In addition, in 2019 we made our first public disclosure through the CDP Climate Change questionnaire and have continued to report since. These efforts not only are a means for continuous improvement and better decision-making, but also improve transparency, help increase stakeholder trust and improve access to capital. Time horizon covered by the financial planning process for Access to Capital: long term.

Avient's sustainable solutions portfolio helps our customers to solve complex sustainability challenges, including enabling the use of more recycled content, or biopolymers, reducing product carbon footprint, sustainable infrastructure, lightweighting, reducing volatile organic compounds, reducing energy usage, and offering eco-conscious solutions. Every year we launch several sustainability enabling solutions for customers within the consumer, packaging, transportation, healthcare, defense, and building and construction sector. Avient defines its Sustainable Solutions in accordance with the Federal Trade Commission's (FTC) 2012 Green Guides for Environmental Marketing Claims and assesses revenues generated from this portfolio as aligned with our climate transition plan. The Green Guides emphasize the importance of clear, evidence--based, and non-deceptive environmental marketing claims. We conduct thorough evaluations of our products, scrutinizing their content, lifecycle, and potential environmental impact at disposal. We are dedicated to being transparent about the use of renewable energy and the authenticity of our certifications. Based on the performance of this portfolio in the past few years, we anticipate Sustainable Solutions will continue to comprise a growing portfolio for our company, as demand increases across the globe. Therefore, we anticipate strong revenue growth coming from our Sustainable Solutions portfolio in line with our strategy to catalyze core businesses (GDP+) and build new platforms of scale (10%+).

[Add row]

(5.9) What is the trend in your organization's water-related capital expenditure (CAPEX) and operating expenditure (OPEX) for the reporting year, and the anticipated trend for the next reporting year?

(5.9.1) Water-related CAPEX (+/- % change)

740000

(5.9.2) Anticipated forward trend for CAPEX (+/- % change)

☒ Yes

Water

(5.10.1) Use of internal pricing for this environmental externality

Select from:

☒ No, and we do not plan to in the next two years

(5.10.2) Primary reason for not pricing this environmental externality

Select from:

☒ Not an immediate strategic priority

(5.10.3) Explain why your organization does not price this environmental externality

Avient does not currently use an internal price on water and does not anticipate implementing one in the foreseeable future. Based on our water risk assessments and the low materiality of water to our operations, an internal water pricing mechanism is not considered a strategic priority. Instead, we focus on monitoring water performance, assessing water-related risks, and implementing stewardship and efficiency initiatives where appropriate.

Other

(5.10.1) Use of internal pricing for this environmental externality

Select from:

☒ No, and we do not plan to in the next two years

[Fixed row]

(5.10.1) Provide details of your organization's internal price on carbon.

(5.10.1.1) Type of pricing scheme

Select from:

☒ Shadow price

(5.10.1.2) Objectives for implementing internal price

Select all that apply

☒ Conduct cost-benefit analysis

☒ Drive energy efficiency

☒ Drive low-carbon investment

☒ Incentivize consideration of climate-related issues in decision making

(5.10.1.3) Factors considered when determining the price

Select all that apply

☒ Alignment with the price of a carbon tax

(5.10.1.4) Calculation methodology and assumptions made in determining the price

Avient established the cost of carbon at 54.58 per ton CO₂ in 2022 to encourage investments in low-carbon and carbon-free technologies. This cost of carbon has increased to \$60.86 in 2025. The price range was established by evaluating various shadow carbon price scenarios that Avient might adopt to align with the Paris Agreement's guidelines. These scenarios considered carbon taxes implemented on a global scale, with rates ranging from conservative in regions like Latin America and Asia to more aggressive in Europe. Given Avient's global presence, the company's carbon pricing strategy aims to create a consistent cost of carbon that is relevant across all regions where it operates.

(5.10.1.5) Scopes covered

Select all that apply

- ☒ Scope 1
- ☒ Scope 2
- ☒ Scope 3, Category 2 - Capital goods

(5.10.1.6) Pricing approach used – spatial variance

(5.11.2.4) Please explain

Suppliers are prioritized as a part of Avient's Sustainable Sourcing Program. The program focuses on embedding sustainable practices into our supply chain decisions. In addition to aligning our suppliers with the Supplier Code of Conduct, the program is designed to address quality, cost and reliability requirements, and a range of sustainability, social responsibility, and environmental considerations. The intent is for Avient to increase supply chain compliance, and to make business allocation and sourcing decisions on who we partner with based on sustainability and quality-related risk. Under this program Avient plans to assess 90% supplier spend for alignment with our sustainability objectives.

[Fixed row]

(5.11.5) Do your suppliers have to meet environmental requirements as part of your organization's purchasing process?

(5.11.7.9) Describe the engagement and explain the effect of your engagement on the selected environmental action

In 2022, Avient established and launched its Sustainable Sourcing Program which provides the ability to evaluate our prioritized partners. This program is designed to address a range of sustainability and environmental considerations along with social responsibility, quality, cost and reliability requirements. The implementation of this program is geared towards evaluation of Avient's top tier suppliers in alignment with the 2030 Sustainability Goal to assess top suppliers representing 90% of our total raw material costs. In 2024, Avient continued to make progress with its Sustainable Sourcing Program to evaluate more of our partners. We partner with EcoVadis and Resilinc in order to complete these evaluations. Success is measured by the percentage of suppliers engaged through this program annually. In 2025, Avient maintained sustainability assessments for key suppliers representing 80% of Avient's direct raw material spend. Of those collected, 66% of the suppliers reported an EcoVadis medal rating in their overall scorecard evaluation. With this engagement, Avient is raising awareness of sustainability criteria that Avient expects its suppliers to meet and explore mutually beneficial partnerships to improve accuracy of scope 3 emissions accounting from purchased goods and services.

(5.11.7.10) Engagement is helping your tier 1 suppliers meet an environmental requirement related to this environmental issue

Select from:

☒ Yes, please specify the environmental requirement :Environmental disclosure through a non-public platform

(5.11.7.11) Engagement is helping your tier 1 suppliers engage with their own suppliers on the selected action

Select from:

☒ 100%

(5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

Avient recognizes that given our position in the supply chain, we are well positioned to enable sustainability along the value chain by innovating in the early to mid-stages of the product life cycle. For Avient, the most material aspect of Life Cycle Analysis (LCA) is our Product Carbon Footprint (PCF). We have established a methodology to standardize our approach to calculating PCF. This methodology was developed in accordance with ISO 14067:2018 for product carbon footprint and is aligned with ISO 14040/14044 for life cycle analysis. We have received third party certification from TÜV Rheinland. We continue to partner with Carbon Minds as well as our supply chain to generate the data and provide consistent chemical carbon footprint data to all customers based on request and hence, identify the % coverage as 100%.

(5.11.9.6) Effect of engagement and measures of success

Our goal is to fully automate this process and expand the PCF data available for the Avient portfolio. The impact and success of this climate-related customer engagement program is measured by expanding the availability of PCF data to additional customers to help them meet their own innovation and sustainability goals. As an example of impact, in 2025, customer Product Carbon Footprint request were processed providing information for over 2,600 different products.

Water

☒ Customers

(5.11.9.2) Type and details of engagement

Education/Information sharing

☒ Educate and work with stakeholders on understanding and measuring exposure to environmental risks

☒ Share information on environmental initiatives, progress and achievements

(5.11.9.3) % of stakeholder type engaged

Select from:

☒ 76-99%

(5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

We engage with both internal and external stakeholders to enable education, transparency, and accountability surrounding the role of water within our operations.

(5.11.9.6) Effect of engagement and measures of success

Externally, we are able to measure our success via ESG reporting platforms where we report water data. Not only does this give us insight into our current rating, but it also helps us better understand potential areas of improvement. Internally, we measure our success with employees through our water project activities. Each year, all of our sites are required to complete either a waste-related project or water-related project to help reduce consumption and increase efficiency. We likewise provide educational information that employees are welcomed to engage with or inquire about if they have questions or need more information.

(5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

We enable all customers' sustainability goals through material science. We have eight primary ways to do this, by combining our material science expertise with the inherent sustainable benefits of polymers: light-weighting, reduced energy use, volatile organic compound reduction, recyclable solutions, biopolymers, eco-conscious, sustainable infrastructure and human health and safety. The 8 ways in which we enable our customers sustainability goals support our efforts to lower carbon footprint. We take 3 strategies to enable our customers to lower their carbon footprint: Reduce the carbon footprint of the polymer • Enable expanded use of recycled content • Expand product portfolio to include more bio/renewable-based resources • Enable the use of more carbon-efficient alternatives Reduce the carbon impact during end-use • Lightweighting • Leverage design expertise to drive product efficiencies Improve the recycling process • Upgrade downcycled material to a higher quality level • Stabilize the polymers in the recycling process Our products and their impact can be found making a positive difference in nearly every industry such as: • Delivering light-weighting benefits in rail, auto, and aerospace to improve fuel efficiency • Extending shelf-life and recyclability of food and beverage packaging to reduce spoilage and waste • Advancing healthcare innovation of medical devices with materials that enable disinfection • In addition, specialized polymer and composite solutions are also helping ensure that customers' sustainable products come to life, as Avient materials can be used in the design of innovative renewable technologies such as wind turbines and solar panels. Because of the broad base of positive impact engagement with our customers can have, we have structured our engagement to include all of our customers.

(5.11.9.6) Effect of engagement and measures of success

Success of this engagement is measured by Avient's growth in Sustainable Solutions portfolio's performance. We began tracking this portfolio's success in 2012. In 2025, we recognized 1,071 million in sustainable solutions sales, as defined using criteria aligned with the FTC 2012 Guide for the Use of Environmental Marketing Claims, now representing a third of our overall revenue. We did so with solutions to Reduce, Renew and Preserve, enabling our customers' sustainability goals through materials science. Part of this increase in revenue is directly related to the way we're engaging with our customers to further understand the value of this portfolio, particularly in terms of climate-change impacts. For example, to meet the customer needs within healthcare industry in 2022, Avient launched Trilliant HC Glass Filled Polyketone, a lower carbon footprint alternative to traditional nylon materials that meets dimensional stability, impact and wear resistance requirements, while enabling the customer to address consistency of supply and sustainability objectives. Therefore, we anticipate strong revenue growth coming from our Sustainable Solutions portfolio in line with our strategy to catalyze core businesses (GDP+) and build new platforms of scale (10%+).

Climate change

Select from:

☒ None

(5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

Avient deeply values its position as a good corporate citizen and the trust we have established within the communities where we operate. Through employee community service, regular interactions between site management and community leaders, we establish active communication and foster open dialogue and strong community ties. Engaging with the public and regulators ensures we remain aligned with community values and regulatory expectations, reinforcing our trusted status and enabling us to make a positive impact.

(5.11.9.6) Effect of engagement and measures of success

Our engagement with the public and regulators has fostered goodwill and enhanced our community participation. These relationships are vital as they reflect our commitment to compliance, transparency, and social responsibility. By actively collaborating with regulatory bodies and contributing to community initiatives, we've established a reputation as a proactive and reliable partner.

	Scope 2, location-based	Scope 2, market-based	Comment
	<i>Select from:</i> ☒ We are reporting a Scope 2, location-based figure	<i>Select from:</i> ☒ We are reporting a Scope 2, market-based figure	<i>We are reporting location and market based emissions; both numbers have been assured.</i>

[Fixed row]

(7.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1, Scope 2 or Scope 3 emissions that are excluded from your disclosure of climate-related data?

Select from:

- ☒ No

(7.5) Provide your base year and base year emissions.

Scope 1

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

37962.0

(7.5.3) Methodological details

Applies to all owned facilities where Avient has operational control. The inventory was compiled in accordance with the WRI/WBCSD Greenhouse Gas (GHG) Protocol – A Corporate Accounting and Reporting Standard (Revised Edition 2013) including the amendment to this protocol, GHG Protocol Scope 2 Guidance (2015). The emission factors are sourced from a variety of reputable public sources which are multiplied by the associated global warming potential (GWP) and added together to determine the total CO2e. Scope 1 emissions are defined as emissions from sources that are owned or controlled by Avient and occur on-site within its operational boundaries and scope 2 emissions are defined as the indirect emissions from purchased electricity. Our scope 1 emissions accounts for diesel, natural gas, and self-generated solar and wind power. We use actual source data for all 4 streams, and gap fill for natural gas if we're unable to receive invoices. Both fuels have EPA EF Hub emission factors applied to them.

Scope 2 (location-based)

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

200833.0

(7.5.3) Methodological details

Applies to all owned facilities where Avient has operational control. The inventory was compiled in accordance with the WRI/WBCSD Greenhouse Gas (GHG) Protocol – A Corporate Accounting and Reporting Standard (Revised Edition 2013) including the amendment to this protocol, GHG Protocol Scope 2 Guidance

(2015). The emission factors are sourced from a variety of reputable public sources which are multiplied by the associated global warming potential (GWP) and added together to determine the total CO₂e. Scope 1 emissions are defined as emissions from sources that are owned or controlled by Avient and occur on-site within its operational boundaries and scope 2 emissions are defined as the indirect emissions from purchased electricity. Our scope 2 emissions account for electric power. We use actual source data and gap fill and estimate if we're unable to receive invoices. Electric power has IEA and EPA eGRID emission factors applied.

Scope 2 (market-based)

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO₂e)

173174

(7.5.3) Methodological details

Applies to all owned facilities where Avient has operational control. The inventory was compiled in accordance with the WRI/WBCSD Greenhouse Gas (GHG) Protocol – A Corporate Accounting and Reporting Standard (Revised Edition 2013) including the amendment to this protocol, GHG Protocol Scope 2 Guidance (2015). The emission factors are sourced from a variety of reputable public sources which are multiplied by the associated global warming potential (GWP) and added together to determine the total CO₂e. Scope 1 emissions are defined as emissions from sources that are owned or controlled by Avient and occur on-site within its operational boundaries and scope 2 emissions are defined as the indirect emissions from purchased electricity. Our scope 2 emissions account for electric power, offsite renewable power, and RECs. We use actual source data for electric power and offsite renewable power, but gap fill and estimate for electric power where we're unable to receive invoices. Electric power and renewable sources have utility emission factors, residual mixes, IEA and EPA eGRID emission factors applied.

Scope 3 category 1: Purchased goods and services

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO₂e)

484421.0

(7.5.3) Methodological details

The inventory was compiled in accordance with the WRI/WBCSD Greenhouse Gas (GHG) Protocol – A Corporate Accounting and Reporting Standard (Revised Edition 2013) including the amendment to this protocol, GHG Protocol Scope 2 Guidance (2015). The emission factors are sourced from a variety of reputable public sources which are multiplied by the associated global warming potential (GWP) and added together to determine the total CO2e. We use DEFRA and EcolInvent emission factors on the goods that Avient produces. We scale up the total emissions to account for 100% of the data.

Scope 3 category 2: Capital goods

(7.5.1) Base year end

12/31/2022

(7.5.2) Base year emissions (metric tons CO2e)

14931.0

(7.5.3) Methodological details

The inventory was compiled in accordance with the WRI/WBCSD Greenhouse Gas (GHG) Protocol – A Corporate Accounting and Reporting Standard (Revised Edition 2013) including the amendment to this protocol, GHG Protocol Scope 2 Guidance (2015). The emission factors are sourced from a variety of reputable public sources which are multiplied by the associated global warming potential (GWP) and added together to determine the total CO2e. Capital expenditure was taken from the 10-k report. The USEEIO emission factor based on spend was used.

Scope 3 category 3: Fuel-and-energy-related activities (not included in Scope 1 or 2)

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

5512

(7.5.3) Methodological details

The inventory was compiled in accordance with the WRI/WBCSD Greenhouse Gas (GHG) Protocol – A Corporate Accounting and Reporting Standard (Revised Edition 2013) including the amendment to this protocol, GHG Protocol Scope 2 Guidance (2015). The emission factors are sourced from a variety of reputable public

sources which are multiplied by the associated global warming potential (GWP) and added together to determine the total CO₂e. This category uses scope 1 and 2 activity data and we apply eGRID, IEA, and DEFRA emission factors.

Scope 3 category 4: Upstream transportation and distribution

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO₂e)

0

(7.5.3) Methodological details

Emissions associated with transport of raw materials to Avient are included in the emission factors chosen in category 1.

Scope 3 category 5: Waste generated in operations

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO₂e)

6234.0

(7.5.3) Methodological details

The inventory was compiled in accordance with the WRI/WBCSD Greenhouse Gas (GHG) Protocol – A Corporate Accounting and Reporting Standard (Revised Edition 2013) including the amendment to this protocol, GHG Protocol Scope 2 Guidance (2015). The emission factors are sourced from a variety of reputable public sources which are multiplied by the associated global warming potential (GWP) and added together to determine the total CO₂e. We collect waste data from our facilities and apply DEFRA emission factors.

Scope 3 category 6: Business travel

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

6479.0

(7.5.3) Methodological details

The inventory was compiled in accordance with the WRI/WBCSD Greenhouse Gas (GHG) Protocol – A Corporate Accounting and Reporting Standard (Revised Edition 2013) including the amendment to this protocol, GHG Protocol Scope 2 Guidance (2015). The emission factors are sourced from a variety of reputable public sources which are multiplied by the associated global warming potential (GWP) and added together to determine the total CO2e. We collect regional data on air travel, car rental, and hotel stays and apply DEFRA emission factors. We scale up the total emissions to account for 100% of the data.

Scope 3 category 7: Employee commuting

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

12578.0

(7.5.3) Methodological details

The inventory was compiled in accordance with the WRI/WBCSD Greenhouse Gas (GHG) Protocol – A Corporate Accounting and Reporting Standard (Revised Edition 2013) including the amendment to this protocol, GHG Protocol Scope 2 Guidance (2015). The emission factors are sourced from a variety of reputable public sources which are multiplied by the associated global warming potential (GWP) and added together to determine the total CO2e. We use distance based calculations derived from employee and office zip codes. Additionally, we account for emissions from employees working from home. DEFRA and US EPA EF Hub are used for emission factors.

Scope 3 category 8: Upstream leased assets

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

2718.0

(7.5.3) Methodological details

The inventory was compiled in accordance with the WRI/WBCSD Greenhouse Gas (GHG) Protocol – A Corporate Accounting and Reporting Standard (Revised Edition 2013) including the amendment to this protocol, GHG Protocol Scope 2 Guidance (2015). The emission factors are sourced from a variety of reputable public sources which are multiplied by the associated global warming potential (GWP) and added together to determine the total CO2e. We account for fleet in this category as we lease vehicles out from a third party. DEFRA emission factors are used for both distance and fuel based calculations.

Scope 3 category 9: Downstream transportation and distribution

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

46417.0

(7.5.3) Methodological details

The inventory was compiled in accordance with the WRI/WBCSD Greenhouse Gas (GHG) Protocol – A Corporate Accounting and Reporting Standard (Revised Edition 2013) including the amendment to this protocol, GHG Protocol Scope 2 Guidance (2015). The emission factors are sourced from a variety of reputable public sources which are multiplied by the associated global warming potential (GWP) and added together to determine the total CO2e. All freight data is accumulated in this category. We include air, rail, sea, and truck data. DEFRA emission factors are applied to each category. We scale up the total emissions to account for 100% of the data.

Scope 3 category 10: Processing of sold products

(7.5.1) Base year end

12/31/2022

(7.5.2) Base year emissions (metric tons CO2e)

1769215.0

(7.5.3) Methodological details

The inventory was compiled in accordance with the WRI/WBCSD Greenhouse Gas (GHG) Protocol – A Corporate Accounting and Reporting Standard (Revised Edition 2013) including the amendment to this protocol, GHG Protocol Scope 2 Guidance (2015). The emission factors are sourced from a variety of reputable public sources which are multiplied by the associated global warming potential (GWP) and added together to determine the total CO2e. Product weight information is collected and an average material production factor is used.

Scope 3 category 11: Use of sold products

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

0

(7.5.3) Methodological details

We have deemed this category as irrelevant.

Scope 3 category 12: End of life treatment of sold products

(7.5.1) Base year end

12/31/2022

(7.5.2) Base year emissions (metric tons CO2e)

437607.0

(7.5.3) Methodological details

The inventory was compiled in accordance with the WRI/WBCSD Greenhouse Gas (GHG) Protocol – A Corporate Accounting and Reporting Standard (Revised Edition 2013) including the amendment to this protocol, GHG Protocol Scope 2 Guidance (2015). The emission factors are sourced from a variety of reputable public sources which are multiplied by the associated global warming potential (GWP) and added together to determine the total CO2e. Product weight information is collected and an average global municipal solid waste factor is applied.

Scope 3 category 13: Downstream leased assets

(7.5.1) Base year end

12/31/2022

(7.5.2) Base year emissions (metric tons CO2e)

429.0

(7.5.3) Methodological details

The inventory was compiled in accordance with the WRI/WBCSD Greenhouse Gas (GHG) Protocol – A Corporate Accounting and Reporting Standard (Revised Edition 2013) including the amendment to this protocol, GHG Protocol Scope 2 Guidance (2015). The emission factors are sourced from a variety of reputable public sources which are multiplied by the associated global warming potential (GWP) and added together to determine the total CO2e. We have attribute information for our leased sites and use CBECS intensities to estimate electric power usage. We apply eGRID emission factors to the data.

Scope 3 category 14: Franchises

(7.5.1) Base year end

[Fixed row]

(7.6) What were your organization's gross global Scope 1 emissions in metric tons CO2e?

Reporting year

(7.6.1) Gross global Scope 1 emissions (metric tons CO2e)

39158.146

(7.6.3) Methodological details

Our scope 1 emissions accounts for diesel, natural gas, solvents burned as fuel, fleet, refrigerants, and self-generated solar and wind power. We use actual source data for all the streams, and gap fill for natural gas if we're unable to receive invoices. IPCC and EPA emission factors are used.

[Fixed row]

(7.7) What were your organization's gross global Scope 2 emissions in metric tons CO2e?

Reporting year

(7.7.1) Gross global Scope 2, location-based emissions (metric tons CO2e)

150655.219

(7.7.2) Gross global Scope 2, market-based emissions (metric tons CO2e)

55724.224

(7.7.4) Methodological details

"Location-Based Methodology Under the location-based approach, our Scope 2 greenhouse gas emissions inventory includes emissions associated with purchased electricity consumption. Emissions are calculated primarily using actual utility consumption data obtained from invoices and other source documentation. In cases where utility invoices or complete consumption data are unavailable, we apply established gap-filling and estimation methodologies to determine electricity usage. Emissions are then calculated using recognized location-based emission factors, including those published by the U.S. EPA's eGRID database and the International Energy Agency (IEA), as applicable to the relevant geographic region. Market-Based Methodology Under the market-based approach, our Scope 2 greenhouse gas emissions inventory includes purchased electricity consumption, offsite renewable electricity purchases, and Renewable Energy Certificates (RECs). Emissions associated with purchased electricity and offsite renewable electricity are calculated using actual source data whenever available. Where utility invoices or complete consumption records cannot be obtained, we utilize gap-filling and estimation methodologies to determine electricity consumption. Market-based emissions are calculated using a hierarchy of applicable emission factors and contractual instruments, including supplier-specific emission factors, Green-e residual mix factors, European residual mix factors, eGRID emission factors, and IEA emission factors, depending on data availability and geographic applicability. This approach reflects both the electricity consumed and the contractual instruments or procurement mechanisms used to support renewable electricity claims."

[Fixed row]

(7.8) Account for your organization's gross global Scope 3 emissions, disclosing and explaining any exclusions.

Purchased goods and services

(7.8.1) Evaluation status

(7.10) How do your gross global emissions (Scope 1 and 2 combined) for the reporting year compare to those of the previous reporting year?

Select from:

☒ Decreased

(7.10.1) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined), and for each of them specify how your emissions compare to the previous year.

Change in renewable energy consumption

(7.10.1.1) Change in emissions (metric tons CO2e)

7289

(7.10.1.2) Direction of change in emissions

Select from:

☒ Decreased

(7.10.1.3) Emissions value (percentage)

7.31

(7.10.1.4) Please explain calculation

Avient purchased RECs, green power, and signed PPAs in the current reporting year and the previous reporting year. We took the difference in renewable energy-specific emissions YoY to complete the calculation. This value divided by total 2024 Scope 1 and Scope 2 emissions (99,7001 metric tons CO2e) results in a 7.31 % decrease.

Other emissions reduction activities

378098

(7.26.13) Please explain how you have identified the GHG source, including major limitations to this process and assumptions made

Company-wide sales value supplied was used as the allocation basis. Allocation method is based on market value, with Currency as the unit. SEM and COLOR segment figures were excluded per instruction. Scope, Scope 3 category, allocated emissions, uncertainty, major emissions sources, third-party verification, and published-reference fields were not inferred because the supplied data did not support them.

[Add row]

(7.27) What are the challenges in allocating emissions to different customers, and what would help you to overcome these challenges?

Row 1

(7.27.1) Allocation challenges

Select from:

☒ Managing the different emission factors of diverse and numerous geographies makes calculating total footprint difficult

(7.27.2) Please explain what would help you overcome these challenges

Globalized standard emission factors.

Row 2

(7.27.1) Allocation challenges

Select from:

☒ Diversity of product lines makes accurately accounting for each product/product line cost ineffective

(7.27.2) Please explain what would help you overcome these challenges

Line level metering of electricity and natural gas use.

[Add row]

(7.28) Do you plan to develop your capabilities to allocate emissions to your customers in the future?

	Do you plan to develop your capabilities to allocate emissions to your customers in the future?	Describe how you plan to develop your capabilities
	<i>Select from:</i> ☒ Yes	<i>Avient plans to track energy use and production volume at the manufacturing line level.</i>

[Fixed row]

(7.29) What percentage of your total operational spend in the reporting year was on energy?

Select from:

☒ More than 0% but less than or equal to 5%

(7.30) Select which energy-related activities your organization has undertaken.

	Indicate whether your organization undertook this energy-related activity in the reporting year
Consumption of fuel (excluding feedstocks)	<i>Select from:</i> ☒ Yes
Consumption of purchased or acquired electricity	<i>Select from:</i> ☒ Yes
Consumption of purchased or acquired heat	<i>Select from:</i> ☒ No
Consumption of purchased or acquired steam	<i>Select from:</i> ☒ Yes
Consumption of purchased or acquired cooling	<i>Select from:</i>

	Indicate whether your organization undertook this energy-related activity in the reporting year
	☒ Yes
Generation of electricity, heat, steam, or cooling	Select from: ☒ Yes

[Fixed row]

(7.30.1) Report your organization’s energy consumption totals (excluding feedstocks) in MWh.

Consumption of fuel (excluding feedstock)

(7.30.1.1) Heating value

Select from:
☒ HHV (higher heating value)

(7.30.1.2) MWh from renewable sources

0

(7.30.1.3) MWh from non-renewable sources

197180.46

(7.30.1.5) Total (renewable + non-renewable) MWh

197180.46

Consumption of purchased or acquired electricity

(7.30.1.2) MWh from renewable sources

256043.32

(7.30.1.3) MWh from non-renewable sources

162961.25

(7.30.1.4) MWh from non-renewable zero or near-zero emission sources

0

(7.30.1.5) Total (renewable + non-renewable) MWh

419004.57

Consumption of purchased or acquired steam

(7.30.1.2) MWh from renewable sources

0

(7.30.1.3) MWh from non-renewable sources

742.46

[Add row]

(7.30.19) Describe how your organization's renewable electricity sourcing strategy directly or indirectly contributes to bringing new capacity into the grid in the countries/areas in which you operate.

Avient, through execution of Virtual Power Purchase Agreements (VPPAs), has supported green energy additionality in the US and Europe. We continue to explore additional opportunities globally. Furthermore, we are considering partnering with suppliers and customers on VPPAs in regions where our electricity off-take is too low to warrant individual participation in VPPAs.

(7.30.20) In the reporting year, has your organization faced barriers or challenges to sourcing renewable electricity?

	Challenges to sourcing renewable electricity
	Select from: ☒ No

[Fixed row]

(7.45) Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.

Row 1

(7.45.1) Intensity figure

0.0000291032

(7.45.2) Metric numerator (Gross global combined Scope 1 and 2 emissions, metric tons CO2e)

94882.37

(7.45.3) Metric denominator

Select from:

☒ unit total revenue

(7.45.4) Metric denominator: Unit total

3260200000

(7.45.5) Scope 2 figure used

Select from:

☒ Market-based

(7.45.6) % change from previous year

5.56

(7.45.7) Direction of change

Select from:

☒ Decreased

(7.45.8) Reasons for change

Select all that apply

☒ Change in renewable energy consumption

☒ Other emissions reduction activities

☒ Change in revenue

(7.45.9) Please explain

Our revenue increased 0.61% while our overall scope 1 and 2 emissions decreased by roughly 4.8%, leading to a 5.56% decrease of the intensity overall. This is due to a change in revenue, change in renewable energy consumption, and various emissions reductions activities.

Row 2

(7.45.1) Intensity figure

0.258794741

(7.45.2) Metric numerator (Gross global combined Scope 1 and 2 emissions, metric tons CO2e)

94882.37

(7.45.3) Metric denominator

Select from:

☒ unit of production

(7.45.4) Metric denominator: Unit total

366631.75

(7.45.5) Scope 2 figure used

Select from:

☒ Market-based

(7.45.6) % change from previous year

3.08

(7.45.7) Direction of change

Select from:

☒ Increased

(7.45.8) Reasons for change

Select all that apply

☒ Change in renewable energy consumption

☒ Other emissions reduction activities

☒ Change in output

(7.45.9) Please explain

Our production decreased by roughly 7.8% while our overall scope 1 and 2 emissions decreased by closer to 4.8% leading to a 3.08% increase in intensity overall. This is due to a change in output, change in renewable energy consumption, and various emissions reductions activities.
[Add row]

(7.52) Provide any additional climate-related metrics relevant to your business.

Row 1

(7.52.1) Description

Select from:

☒ Waste

(7.52.2) Metric value

0.09

(7.52.3) Metric numerator

Metric Tons

(7.52.4) Metric denominator (intensity metric only)

per metric ton produced

(7.52.5) % change from previous year

34

(7.52.6) Direction of change

Select from:

☒ Decreased

(7.52.7) Please explain

Avient's facilities had 80 active waste reduction initiatives active in CY2025 that are responsible for the sizable decrease in waste intensity
[Add row]

(7.53) Did you have an emissions target that was active in the reporting year?

Select all that apply

☒ Absolute target

(7.53.1) Provide details of your absolute emissions targets and progress made against those targets.

Row 1

(7.53.1.1) Target reference number

Select from:

☒ Abs 1

(7.53.1.2) Is this a science-based target?

Select from:

☒ No, but we anticipate setting one in the next two years

(7.53.1.5) Date target was set

12/31/2020

(7.53.1.6) Target coverage

Select from:

☒ Organization-wide

(7.53.1.7) Greenhouse gases covered by target

Select all that apply

- ☒ Carbon dioxide (CO2)
- ☒ Methane (CH4)
- ☒ Nitrous oxide (N2O)

(7.53.1.8) Scopes

We are proud to have reached our original target of 35% in 2021 by reducing our Scope 1 & 2 GHG emissions by 40%. Our next level commitment for 2030 has been established, whereby we will achieve a reduction of 60% and operational carbon neutrality by 2050.

(7.53.1.83) Target objective

The target objective is to reduce our emissions and eventually become carbon neutral.

(7.53.1.84) Plan for achieving target, and progress made to the end of the reporting year

Avient's approach to reducing our greenhouse gases and other emissions is focused on four main areas: increasing equipment and building energy efficiency, process transformation, expanding the use of renewable or low-carbon energy, and supporting technology breakthroughs by meeting our customer's sustainable solution needs. Strategic plans at the facility and business level include planned efforts to achieve sustainability and operational goals which will allow Avient to make continuous improvement towards our goals.

By 2030, Avient will reduce waste to landfill by 35% from the 2019 baseline

(7.53.1.83) Target objective

The target objective is to reduce our scope 3 waste emissions, which goes hand in hand with our goal to reduce packaging waste.

(7.53.1.84) Plan for achieving target, and progress made to the end of the reporting year

Avient's efforts are aimed at reducing the quantity of hazardous and non-hazardous waste generated. Our waste management approach adds value by reducing the risk of environmental harm as well as costs associated with waste management. We track our waste data on a quarterly basis as part of routine reporting of waste activities and measure progress against our goal.

(7.54.1.19) Explain target coverage and identify any exclusions

62.32% of Avient's electricity demand globally was from renewable sources in 2024, up from 0.69% in 2019. Avient became a member of the RE100 initiative in 2021, committing to achieve 60% renewable energy by 2030.

(7.54.1.20) Target objective

Avient is committed to reduce Scope 1 & 2 greenhouse gas emissions by 55% by 2030 and achieve operational carbon neutrality by 2050 (against a 2019 baseline). Additionally, Avient became a member of the RE100 initiative in 2021, committing to achieving 60% renewable energy use by 2030.

(7.54.1.22) List the actions which contributed most to achieving this target

Avient continues to leverage Virtual Power Purchase Agreements (VPPA). While expanding the procurement of renewable energy globally is an important element of our low carbon strategy, Avient also continues to explore and implement on-site renewable energy opportunities and energy saving projects. In 2025, we

implemented 103 energy saving initiatives e.g. installed high-efficiency HVAC units, VFDs, energy efficiency lighting systems etc. resulting in 7,500 MWh of annual savings. These projects have a cumulative effect on reducing our operational energy needs and thus our impacts on the environment

☒ RE100

(7.54.1.19) Explain target coverage and identify any exclusions

62.32% of Avient's electricity demand globally was from renewable sources in 2024, up from 0.69% in 2019. Avient became a member of the RE100 initiative in 2021, committing to achieve 60% renewable energy by 2030.

(7.54.1.20) Target objective

Avient is committed to reduce Scope 1 & 2 greenhouse gas emissions by 55% by 2030 and achieve operational carbon neutrality by 2050 (against a 2019 baseline). Additionally, Avient became a member of the RE100 initiative in 2021, committing to achieving 60% renewable energy use by 2030.

(7.54.1.21) Plan for achieving target, and progress made to the end of the reporting year

To ensure progress towards our goals, Avient has developed an energy efficiency program that is driven by Corporate mandates to identify/execute/report energy savings activities at the facility level. Progress against this expectation is audited quarterly. Overarching goal of this objective is to identify savings potential through the calculation and analysis of energy consumption which drives optimized use of equipment and systems. To arbitrate between different options and further support investments in clean and lower-carbon solutions, even when they do not present the most attractive returns, we give higher weighting factors to energy projects that ultimately improve overall scores and prioritize them in our investment decision matrix.

Select all that apply

☒ Other, please specify :Plastics Europe and American Chemistry Council commitments to enable plastics packaging to be 100% re-used, recycled or recovered by 2040.

(7.54.2.18) Please explain target coverage and identify any exclusions

By 2030, Avient will enable 100% of our products manufactured for packaging applications to be recyclable or reusable to advance the circular economy. Current: • Approximately 90% of Avient's products met these criteria in 2019. • Avient supports the Plastics Europe and American Chemistry Council commitments to enable plastics packaging to be 100% re-used, recycled or recovered by 2040. • It is estimated that 9% of the world's plastic is recycled by end users. Though this goal is most closely related to our products, this goal necessitates that any waste produced via the manufacturing process also be recycle, and so is indirectly tied to our Abs3 waste goal.

(7.54.2.19) Target objective

The objective is to ensure advance the circular economy through product and packaging specific initiatives.

(7.54.2.20) Plan for achieving target, and progress made to the end of the reporting year

Avient is committed to eliminating plastic waste through innovation, broad stakeholder engagement and strong partnerships and alliances. We are continuously making a positive impact through our innovative portfolio of technologies that enable our customers to improve plastic recyclability and reduce the amount of material required for packaging.

☒ No, it's not part of an overarching initiative

(7.54.2.18) Please explain target coverage and identify any exclusions

By 2030, to ensure alignment with Avient's expectations on environmental, social and governance requirements, Avient will assess its top suppliers representing 90% of our total raw material costs. Current: 75% of our top suppliers have been assessed through the end of 2021. Note: a base year is not applicable to this goal, because as the number of suppliers fluctuates so does the number of suppliers that need to be assessed to achieve our goal – i.e. the achievement of the target is not tied to a base year.

(7.54.2.19) Target objective

The objective is to ensure that we are creating relationships with suppliers who share the same ESG and sustainability aspirations.

(7.54.2.20) Plan for achieving target, and progress made to the end of the reporting year

Our suppliers conducted a best-in-class self-assessment utilizing EcoVadis on environmental, social and governance requirements aligned with the UN Global Compact principles. We are targeting 80% of our total direct spend in 2025 towards our 2030 Sustainability Goal of 90%.

(7.54.2.18) Please explain target coverage and identify any exclusions

By 2030, Avient will deliver cumulative annual growth from our Sustainable Solutions portfolio of 8-12% with 2020 as a baseline. • In 2021, our sustainable solutions portfolio grew by 16% over prior year.

(7.54.2.19) Target objective

The objective is to ensure that sustainability is ingrained into our business.

(7.54.2.20) Plan for achieving target, and progress made to the end of the reporting year

We are committed to growing our innovation pipeline by developing innovative products that meet customer unmet needs. A crucial enabler to living our Sustainability Promise is having deep material science and commercial expertise on our team, and we've heavily invested in this area. Since 2016, we have grown 12% annually.

(7.55.3) What methods do you use to drive investment in emissions reduction activities?

Row 1

(7.55.3.1) Method

Select from:

☒ Partnering with governments on technology development

(7.55.3.2) Comment

An active program exists to periodically assess availability of government incentives related to greener technology use and development.

Row 2

(7.55.3.1) Method

Select from:

☒ Financial optimization calculations

(7.55.3.2) Comment

Avient has developed an energy efficiency program that is driven by Corporate mandates to identify/execute/report energy savings activities at the facility level. Progress against this expectation is audited quarterly. Overarching goal of this objective is to identify savings potential through the calculation and analysis of energy consumption which drives optimized use of equipment and systems. In addition, when evaluating Capital expenditure decisions, we classify the investment opportunity in three main categories: quality, productivity and Environmental Health and Safety (EHS). To arbitrate between different options and further support investments in clean and lower-carbon solutions (that are classified as EHS) even when they do not present the most attractive returns, we give a higher weighting factors to EHS projects that ultimately improve overall scores and prioritize them in our investment decision matrix. In 2024, Avient directed 3.48 MM towards energy efficiency projects. Avient also established the cost of carbon at \$58.69 per ton CO2 to encourage investments in low-carbon and carbon-free technologies.

Row 3

(7.55.3.1) Method

Select from:

☒ Employee engagement

(7.55.3.2) Comment

Expectations around energy savings activities communicated to all in conjunction with training and guidance for execution. Incentive programs made available to further promote participation.

Row 4

(7.55.3.1) Method

Select from:

☒ Compliance with regulatory requirements/standards

(7.55.3.2) Comment

Avient believes that sustainable business success is closely tied to strict compliance with regulatory requirements and our own ethical standards.
[Add row]

(7.73) Are you providing product level data for your organization's goods or services?

Select from:

☒ No, I am not providing data

(7.74) Do you classify any of your existing goods and/or services as low-carbon products?

Select from:

☒ Yes

(7.74.1) Provide details of your products and/or services that you classify as low-carbon products.

Row 1

(7.74.1.1) Level of aggregation

Select from:

☒ Group of products or services

(7.74.1.2) Taxonomy used to classify product(s) or service(s) as low-carbon

Select from:

☒ Other, please specify :(US Federal Trade Commission Green Guides)

(7.74.1.3) Type of product(s) or service(s)

Other

☒ Other, please specify :Material solutions for products designed for resource conservation

(7.74.1.4) Description of product(s) or service(s)

Avient has a highly-technical and broad portfolio of material solutions that help our customers—and our planet—be more sustainable. It is clear that these materials have and will continue to comprise a growing portfolio for our company, as demand increases across the globe and canvasses many end markets. Our innovation efforts and collaboration with customers have increased in lockstep. As a result, Avient revenue from sustainable solutions has more than doubled compared to 2016. In 2023 we delivered 1.135 billion in sustainable solutions sales, as defined using criteria aligned with the FTC 2012 Guide for the Use of Environmental Marketing Claims. And we did so while also yielding sustainable benefits in these eight key areas where our material science is having the most impact. As we look to the future, we expect these eight areas to gain even more importance—and acceptance—among our customers and their end users. We also expect it will further the win-win benefit trend for both our planet and Avient. By 2030, 100% of Avient's technology platform projects will deliver sustainable solutions that enable our customers' innovation goals

(7.74.1.5) Have you estimated the avoided emissions of this low-carbon product(s) or service(s)

Select from:

☒ No

(7.74.1.13) Revenue generated from low-carbon product(s) or service(s) as % of total revenue in the reporting year

39

[Add row]

(7.79) Has your organization retired any project-based carbon credits within the reporting year?

Select from:

☒ No

C9. Environmental performance - Water security

(9.1) Are there any exclusions from your disclosure of water-related data?

Select from:

☒ No

(9.2) Across all your operations, what proportion of the following water aspects are regularly measured and monitored?

Water withdrawals – total volumes

(9.2.1) % of sites/facilities/operations

Select from:

☒ 76-99

(9.2.2) Frequency of measurement

Select from:

☒ At least once a month

(9.2.3) Method of measurement

Depending on the site, the data is collected either directly from site-level utility bills, meter readings, or internal tracking systems.

(9.2.4) Please explain

Each relevant facility reviews and reports monthly withdrawal volumes using our environmental data tracking platform. Data is then aggregated and validated by corporate-level environmental team to ensure accuracy and alignment with historical data.

Water withdrawals – volumes by source

(9.2.1) % of sites/facilities/operations

Select from:

☒ 76-99

(9.2.2) Frequency of measurement

Select from:

☒ At least once a month

(9.2.3) Method of measurement

Depending on the site, the data is collected either directly from site-level utility bills, meter readings, or internal tracking systems.

(9.2.4) Please explain

Each relevant facility reviews and reports monthly withdrawal volumes using our environmental data tracking platform. Data is then aggregated and validated by the corporate-level environmental team to ensure accuracy and alignment with historical data. The majority of our sites withdraw water from their local municipality. Of those that don't, water is typically obtained from a well or rain water tanks. Moving forward, the corporate team will continue to encourage and support more sites in implementing granular data tracking to improve data coverage and enhance the accuracy of water reporting.

Water withdrawals quality

(9.2.1) % of sites/facilities/operations

Select from:

☒ 51-75

(9.2.2) Frequency of measurement

Select from:

☒ Other, please specify :Depending on the site, Depending on the site, frequency varies between monthly, quarterly, and annually.

(9.2.3) Method of measurement

Depending on the site, the data is collected either directly from site-level utility bills, meter readings, internal tracking systems, or via third-party assessments.

(9.2.4) Please explain

Given the number and diversity of our sites, data tracking frequency varies from daily, monthly, quarterly, or annually. Parameters also vary depending on the location, with all relevant sites incorporating a minimum of one of the following parameters: BOD, COD, Oil and Grease, TDS, odor, color, turbidity, taste, temperature, pH value, conductivity, and microbiological. Only sites where water is a relevant input were included in the % of site column. Moving forward, the corporate team will continue to encourage and support more sites in implementing granular data tracking to improve data coverage and enhance the accuracy of water reporting.

Water discharges – total volumes

(9.2.1) % of sites/facilities/operations

Select from:

☒ 76-99

(9.2.2) Frequency of measurement

Select from:

☒ Other, please specify :Depending on the site, Depending on the site, frequency varies between monthly, quarterly, and annually.

(9.2.3) Method of measurement

Depending on the site, the data is collected either directly from site-level utility bills, meter readings, or internal tracking systems.

(9.2.4) Please explain

Each relevant facility reviews and reports monthly withdrawal volumes using our environmental data tracking platform. Data is then aggregated and validated by corporate-level environmental team to ensure accuracy and alignment with historical data. Moving forward, the corporate team will continue to encourage and support more sites in implementing granular data tracking to improve data coverage and enhance the accuracy of water reporting.

Water discharges – volumes by destination

(9.2.1) % of sites/facilities/operations

Select from:

☒ 76-99

(9.2.2) Frequency of measurement

Select from:

☒ Other, please specify :Depending on the site, Depending on the site, frequency varies between monthly, quarterly, and annually.

(9.2.3) Method of measurement

Depending on the site, the data is collected either directly from site-level utility bills, meter readings, or internal tracking systems.

(9.2.4) Please explain

Each relevant facility reviews and reports monthly withdrawal volumes using our environmental data tracking platform, Resource Advisor. Data is then aggregated and validated by the corporate-level environmental team to ensure accuracy and alignment with historical data. The majority of our sites discharge water back to their local municipality. Moving forward, the corporate team will continue to encourage and support more sites in implementing granular data tracking to improve data coverage and enhance the accuracy of water reporting.

Water discharges – volumes by treatment method

(9.2.1) % of sites/facilities/operations

Select from:

☒ 51-75

(9.2.2) Frequency of measurement

Select from:

☒ Other, please specify :Depending on the site, frequency varies between monthly, quarterly, and annually.

(9.2.3) Method of measurement

Depending on the site, the data is collected either directly from site-level utility bills, meter readings, or internal tracking systems.

(9.2.4) Please explain

Depending on the location, each relevant site measures Water discharge - volumes by treatment method utilizing third-party testing either on a monthly, quarterly, or annual basis. Moving forward, the corporate team will continue to encourage and support more sites in implementing granular data tracking to improve data coverage and enhance the accuracy of water reporting.

Water discharge quality – by standard effluent parameters

(9.2.1) % of sites/facilities/operations

Select from:

☒ 26-50

(9.2.2) Frequency of measurement

Select from:

☒ Other, please specify :Depending on the site, frequency varies between monthly, quarterly, or annually.

(9.2.3) Method of measurement

Depending on the site, the data is collected either directly from site-level utility bills, meter readings, or internal tracking systems.

(9.2.4) Please explain

Depending on the location, each relevant site measures water discharge quality – by standard effluent parameters either by the site directly or by a third-party. Moving forward, the corporate team will continue to encourage and support more sites in implementing granular data tracking to improve data coverage and enhance the accuracy of water reporting.

Water discharge quality – emissions to water (nitrates, phosphates, pesticides, and/or other priority substances)

(9.2.1) % of sites/facilities/operations

Select from:

☒ Not relevant

(9.2.4) Please explain

Due to water being immaterial to our operations, this stream is not relevant to us.

Water discharge quality – temperature

(9.2.1) % of sites/facilities/operations

Select from:

☒ 26-50

(9.2.2) Frequency of measurement

Select from:

☒ Other, please specify :Depending on the site, temperature is monitored anywhere from twice a day, once a month, once a quarter, twice a year, or annually.

(9.2.3) Method of measurement

Depending on the site, the data is collected either directly from site-level utility bills, meter readings, or internal tracking systems.

(9.2.4) Please explain

Each relevant facility monitors water discharge temperature using varying methods depending on the location; from wastewater thermometers to third-party testing. Moving forward, the corporate team will continue to encourage and support more sites in implementing granular data tracking to improve data coverage and enhance the accuracy of water reporting.

Water consumption – total volume

(9.2.1) % of sites/facilities/operations

Select from:

☒ 76-99

(9.2.2) Frequency of measurement

Select from:

☒ At least once a month

(9.2.3) Method of measurement

Depending on the site, the data is collected either directly from site-level utility bills, meter readings, or internal tracking systems.

(9.2.4) Please explain

Each relevant facility reviews and reports monthly withdrawal volumes using our environmental data tracking platform. Data is then aggregated and validated by corporate-level environmental team to ensure accuracy and alignment with historical data. Moving forward, the corporate team will continue to encourage and support more sites in implementing granular data tracking to improve data coverage and enhance the accuracy of water reporting.

Water recycled/reused

(9.2.1) % of sites/facilities/operations

Select from:

☒ 100%

(9.2.2) Frequency of measurement

Select from:

☒ Other, please specify :Depending on the site, frequency varies from daily, monthly, quarterly, or annually.

(9.2.3) Method of measurement

Depending on the site, the data is collected either directly from site-level utility bills, meter readings, or internal tracking systems.

(9.2.4) Please explain

All relevant facilities track water recycled/reused as a part of their overall water monitoring.

The provision of fully-functioning, safely managed WASH services to all workers

(9.2.1) % of sites/facilities/operations

Select from:

☒ 100%

(9.2.2) Frequency of measurement

Select from:

☒ Other, please specify :Depending on the site, frequency varies from daily, monthly, quarterly, or annually.

(9.2.3) Method of measurement

Depending on the site, the data is collected either directly from site-level utility bills, meter readings, or internal tracking systems.

(9.2.4) Please explain

*All facilities maintain safe, fully-functional WASH services for all employees. Any issues are promptly reported to management and resolved in a timely manner.
[Fixed row]*

(9.2.2) What are the total volumes of water withdrawn, discharged, and consumed across all your operations, how do they compare to the previous reporting year, and how are they forecasted to change?

Total withdrawals

(9.2.2.1) Volume (megaliters)

1706

(9.2.2.2) Comparison with previous reporting year

Select from:

☒ About the same

(9.2.2.3) Primary reason for comparison with previous reporting year

Select from:

☒ Increase/decrease in business activity

(9.2.2.4) Five-year forecast

Select from:

☒ Lower

(9.2.2.5) Primary reason for forecast

Select from:

☒ Increase/decrease in efficiency

(9.2.2.6) Please explain

The threshold for measuring change is: +/- 5% = about the same +/- 5-15% = higher / lower > +/- 15% = much higher / lower. Based on this methodology, total water withdrawal has remained about the same compared to 2024. Ongoing water reduction and efficiency projects implemented across Avient's sites have helped offset increases in production and operational activity, limiting growth in overall water withdrawal. Looking ahead, Avient expects intensity to decrease as a result of continued innovation, site-level water conservation initiatives, process efficiency improvements, and the implementation of its water stewardship goals.

Total discharges

(9.2.2.1) Volume (megaliters)

1285

(9.2.2.2) Comparison with previous reporting year

Select from:

☒ About the same

(9.2.2.3) Primary reason for comparison with previous reporting year

Select from:

☒ Increase/decrease in business activity

(9.2.2.4) Five-year forecast

Select from:

☒ Lower

(9.2.2.5) Primary reason for forecast

Select from:

☒ Increase/decrease in efficiency

(9.2.2.6) Please explain

The threshold for measuring change is: +/- 5% = about the same +/- 5-15% = higher / lower > +/- 15% = much higher / lower. Based on this methodology, total discharge has remained about the same compared to 2024. Ongoing water reduction and efficiency projects implemented across Avient's sites have helped offset increases in production and operational activity. Looking ahead, Avient expects intensity to decrease as a result of continued innovation, site-level water conservation initiatives, process efficiency improvements, and the implementation of its water stewardship goals.

Total consumption

(9.2.2.1) Volume (megaliters)

421

(9.2.2.2) Comparison with previous reporting year

Select from:

☒ About the same

(9.2.2.3) Primary reason for comparison with previous reporting year

Select from:

☒ Increase/decrease in business activity

(9.2.2.4) Five-year forecast

Select from:

☒ Lower

(9.2.2.5) Primary reason for forecast

Select from:

☒ Increase/decrease in efficiency

(9.2.2.6) Please explain

The threshold for measuring change is: +/- 5% = about the same +/- 5-15% = higher / lower > +/- 15% = much higher / lower. Based on this methodology, total water consumption has remained about the same compared to 2024. Ongoing water reduction and efficiency projects implemented across Avient's sites have helped offset increases in production and operational activity, limiting growth in total consumption. Looking ahead, Avient expects intensity to decrease as a result of continued innovation, site-level water conservation initiatives, process efficiency improvements, and the implementation of its water stewardship goals.

[Fixed row]

(9.2.4) Indicate whether water is withdrawn from areas with water stress, provide the volume, how it compares with the previous reporting year, and how it is forecasted to change.

(9.2.4.1) Withdrawals are from areas with water stress

Select from:

☒ Yes

(9.2.4.2) Volume withdrawn from areas with water stress (megaliters)

734

(9.2.4.3) Comparison with previous reporting year

Select from:

☒ Higher

(9.2.4.4) Primary reason for comparison with previous reporting year

Select from:

☒ Other, please specify :The increase in Water Withdrawal from areas with high or extremely high risk result from a mix of data accuracy and increase in business activity.

(9.2.4.5) Five-year forecast

Select from:

☒ Lower

(9.2.4.6) Primary reason for forecast

Select from:

☒ Increase/decrease in efficiency

43.02

(9.2.4.8) Identification tool

Identification tool used

☒ WRI Aqueduct

(9.2.4.9) Please explain

The threshold for measuring change is: +/- 5% = about the same +/- 5-15% = higher / lower > +/- 15% = much higher / lower. Based on this methodology, the change between 2024 and 2025 would generally be categorized as "much higher." However, Avient has classified the change as "higher" because the increase is primarily driven by business growth and enhanced reporting completeness rather than a significant change in operational water efficiency. Over the next five years, Avient expects this metric to move toward "About the same" or "lower" as a result of progress against its water stewardship targets, ongoing efficiency initiatives, and continued investment in water conservation and management programs across its global operations.

[Fixed row]

(9.2.7) Provide total water withdrawal data by source.

Fresh surface water, including rainwater, water from wetlands, rivers, and lakes

(9.2.7.1) Relevance

☒ Increase/decrease in business activity

(9.2.8.5) Please explain

The threshold for measuring change is: +/- 5% = about the same +/- 5-15% = higher / lower > +/- 15% = much higher / lower. Based on this methodology, water discharge to third-party destinations remained about the same between 2024 and 2025. Increases associated with business growth were largely offset by water efficiency improvements and ongoing conservation efforts across Avient's operations. Over the longer term, Avient expects total water intensity to decrease as a result of continued progress toward its water stewardship goals, annual water reduction initiatives, process improvements, and enhanced water management practices. Water discharged from operations is expected to continue being routed primarily to third-party municipal wastewater treatment facilities.

[Fixed row]

(9.2.9) Indicate the highest level to which your wastewater is treated (either by your organization or a third party) before being discharged to the environment.

Quaternary treatment

(9.2.9.1) Volume (megaliters)

0

(9.2.9.6) Please explain

This category is not applicable to Avient's operations. Most sites obtain water from and discharge water to local municipal systems while adhering to all applicable regulatory requirements.

Tertiary treatment

(9.2.9.4) % of discharge volume treated in compliance with local regulatory standards

Select from:

☒ 100

(9.2.9.5) Factors considered in determining appropriate treatment level beyond local regulatory standards

Select all that apply

☒ No other factors considered

(9.2.9.6) Please explain

The threshold for measuring change is: $\pm 5\%$ = about the same; $\pm 5\text{-}15\%$ = higher/lower; and $>\pm 15\%$ = much higher/lower. Based on this methodology, the volume of water receiving primary treatment in 2025 remained about the same compared with 2024. Primary treatment at Avient facilities typically involves physical treatment processes designed to remove suspended solids and other particulate matter from wastewater prior to discharge to a third-party destination, such as a municipal wastewater treatment facility. The level of primary treatment applied remained consistent year over year, reflecting stable wastewater management practices across operations.

No treatment

(9.2.9.1) Volume (megaliters)

1259.62

☒ Increase/decrease in business activity

(9.2.9.4) % of discharge volume treated in compliance with local regulatory standards

Select from:

☒ 100

(9.2.9.6) Please explain

The majority of Avient's water discharge is directed to local municipal wastewater treatment systems following appropriate treatment and in accordance with applicable local laws and regulations. Avient evaluates changes in water discharge using the following thresholds: $\pm 5\%$ = about the same; $\pm 5\text{--}15\%$ = higher/lower; and $>\pm 15\%$ = much higher/lower. Based on this methodology, water discharge to third-party destinations in 2025 remained about the same compared with 2024. Looking ahead, Avient expects the majority of water discharge to continue being directed to third-party destinations, primarily local municipal wastewater treatment systems. However, ongoing process improvements, water efficiency projects, innovation initiatives, and progress toward the company's water reduction goals are expected to contribute to reductions in both water withdrawal and water discharge over time.

Unknown

(9.2.9.1) Volume (megaliters)

At the site level, Avient does not publicly disclose water withdrawal and discharge data for facilities located in high or extremely high water risk areas, as water is not considered a material input across the majority of our operations. To assess and monitor water-related risks, Avient utilizes the World Resources Institute's Aqueduct Water Risk Atlas, which evaluates current and projected water stress across multiple indicators. Based on the Baseline Water Stress (BWS) indicator, 42 of our facilities have been identified as operating in areas of high or extremely high water risk. These results support our ongoing efforts to monitor water consumption, evaluate potential risks, and identify opportunities for water stewardship and conservation where appropriate.

At the site level, Avient does not publicly disclose water withdrawal and discharge data for facilities located in high or extremely high water risk areas, as water is not considered a material input across the majority of our operations. To assess and monitor water-related risks, Avient utilizes the World Resources Institute's Aqueduct Water Risk Atlas, which evaluates current and projected water stress across multiple indicators. Based on the Baseline Water Stress (BWS) indicator, 42 of our facilities have been identified as operating in areas of high or extremely high water risk. These results support our ongoing efforts to monitor water consumption, evaluate potential risks, and identify opportunities for water stewardship and conservation where appropriate.

At the site level, Avient does not publicly disclose water withdrawal and discharge data for facilities located in high or extremely high water risk areas, as water is not considered a material input across the majority of our operations. To assess and monitor water-related risks, Avient utilizes the World Resources Institute's Aqueduct Water Risk Atlas, which evaluates current and projected water stress across multiple indicators. Based on the Baseline Water Stress (BWS) indicator, 42 of our facilities have been identified as operating in areas of high or extremely high water risk. These results support our ongoing efforts to monitor water consumption, evaluate potential risks, and identify opportunities for water stewardship and conservation where appropriate.

At the site level, Avient does not publicly disclose water withdrawal and discharge data for facilities located in high or extremely high water risk areas, as water is not considered a material input across the majority of our operations. To assess and monitor water-related risks, Avient utilizes the World Resources Institute's Aqueduct Water Risk Atlas, which evaluates current and projected water stress across multiple indicators. Based on the Baseline Water Stress (BWS) indicator, 42 of our facilities have been identified as operating in areas of high or extremely high water risk. These results support our ongoing efforts to monitor water consumption, evaluate potential risks, and identify opportunities for water stewardship and conservation where appropriate.

(9.3.2) For the facilities in your direct operations referenced in 9.3.1, what proportion of water accounting data has been third party verified?

Water withdrawals – total volumes

(9.3.2.1) % verified

Select from:

☒ Not verified

(9.3.2.3) Please explain

Water consumption is not considered a material aspect of Avient's operations, as overall water use and consumption levels are relatively low compared to other environmental impacts. As a result, Avient has prioritized resources toward areas where the company can achieve greater environmental benefits, including energy management, greenhouse gas emissions reduction, and waste minimization. Nevertheless, Avient continues to enhance its water data collection and accounting processes and pursues water conservation opportunities where appropriate. While third-party verification of water data is not currently prioritized, Avient may consider external assurance in the future as its water management and reporting programs continue to mature.

Global environmental treaties/initiatives/frameworks aligned with or supported by this target

☒ Other, please specify :World Resource Institutes Aqueduct Tool

(9.15.1.13) Explain target coverage and identify any exclusions

Our target covers all manufacturing sites that have been determined to be located within an extremely high risk area.

(9.15.1.14) Plan for achieving target, and progress made to the end of the reporting year

Progress toward Avient's 2030 target for sites implementing water stewardship plans in extremely high water-stress areas is underway. During the reporting year, Avient continued to assess its global manufacturing footprint using the World Resources Institute (WRI) Aqueduct Water Risk Atlas to identify facilities located in areas classified as having extremely high water stress.

(9.15.1.18) Further details of target

Based on this assessment, Avient has begun the process of developing and formalizing water stewardship plans for applicable sites. These plans are intended to improve understanding of site-specific water risks and opportunities, support responsible water management practices, and identify actions to reduce water use and strengthen operational resilience. As the program matures, Avient will continue working with identified sites to refine water stewardship plans, establish site-specific actions, and track progress toward achieving its 2030 target.

[Add row]

C10. Environmental performance - Plastics

(10.1) Do you have plastics-related targets?

(10.1.1) Targets in place

Select from:

☒ No, and we do not plan to within the next two years

(10.1.2) Primary reason for not having a plastics-related target

Select from:

☒ Other, please specify :While we do not have a specific plastic-related 2030 goal, our broader sustainability goals, including reducing emissions, waste, and resource consumption, support more sustainable plastic production and use.

(10.1.3) Explain why you did not have an active plastics-related target in the reporting year

Our plastic related targets are heavily integrated into many of our sustainability initiatives such as: our annual target to reduce landfill intensity by 2.5%, incorporating bio-based materials into products and committing to operation clean sweep.

[Fixed row]

(10.2) Indicate whether your organization engages in the following activities.

Production/commercialization of plastic polymers (including plastic converters)

(10.2.1) Activity applies

Select from:

☒ Yes

(10.2.3) Please explain

A core component of Avient's business is the production and commercialization of polymer materials and solutions. Through its global operations, the company manufactures and supplies a broad portfolio of polymer-based products serving diverse end markets and applications.

Production/commercialization of durable plastic goods and/or components (including mixed materials)

(10.2.1) Activity applies

Select from:

☒ Yes

(10.2.3) Please explain

The production and commercialization of durable plastic goods and components is an important component of Avient's business. Avient develops and supplies polymer materials that are used in durable products and applications across a wide range of industries and end markets.

Usage of durable plastics goods and/or components (including mixed materials)

(10.2.1) Activity applies

Select from:

☒ No

(10.2.3) Please explain

This category is not relevant to Avient's operations.

(10.6.16) Please explain

8.14% of our waste is categorized under "Other". Our sustainability goal of achieving a 2.5% annual reduction in landfill intensity continues to drive strategic and innovative initiatives across our operations. Thanks to these efforts, we've made meaningful progress in improving data tracking, enhancing landfill diversion practices, and identifying new opportunities for waste reduction. These initiatives not only support our landfill reduction targets but also strengthen our overall waste management strategy.

[Fixed row]

C11. Environmental performance - Biodiversity

(11.2) What actions has your organization taken in the reporting year to progress your biodiversity-related commitments?

(11.2.1) Actions taken in the reporting period to progress your biodiversity-related commitments

Select from:

☒ Yes, we are taking actions to progress our biodiversity-related commitments

(11.2.2) Type of action taken to progress biodiversity- related commitments

Select all that apply

☒ Land/water management

☒ Education & awareness

☒ Law & policy

☒ Other, please specify :Assessing and monitoring Biodiversity Risk level utilizing the World Wildlife Fund

[Fixed row]

(11.3) Does your organization use biodiversity indicators to monitor performance across its activities?

	Does your organization use indicators to monitor biodiversity performance?	Indicators used to monitor biodiversity performance
	Select from: ☒ Yes, we use indicators	Select all that apply

	Does your organization use indicators to monitor biodiversity performance?	Indicators used to monitor biodiversity performance
		☒ Other, please specify :These indicators support our broader sustainability goals, including reducing landfill waste, energy use, and water consumption. We also utilize the WWF Biodiversity Risk Filter to assess biodiversity-related risks.

[Fixed row]

(11.4) Does your organization have activities located in or near to areas important for biodiversity in the reporting year?

Legally protected areas

(11.4.1) Indicate whether any of your organization's activities are located in or near to this type of area important for biodiversity

Select from:

☒ Yes

(11.4.2) Comment

To strengthen our commitment to biodiversity and identify sites located in areas of varying ecological risk, we conducted a global assessment to better understand the local biodiversity challenges surrounding our operations. We have eight sites that fall within Legally Protected Areas. All will continue to monitor risk levels while engaging in sustainable practices to lower environmental impacts when possible.

UNESCO World Heritage sites

(11.4.1) Indicate whether any of your organization's activities are located in or near to this type of area important for biodiversity

Select from:

☒ Yes

(11.4.2) Comment

To strengthen our commitment to biodiversity and identify sites located in areas of varying ecological risk, we conducted a global assessment to better understand the local biodiversity challenges surrounding our operations. We have one site that falls within a UNESCO World Heritage Site. It will continue to monitor risk levels while engaging in sustainable practices to lower environmental impacts when possible.

UNESCO Man and the Biosphere Reserves

(11.4.1) Indicate whether any of your organization's activities are located in or near to this type of area important for biodiversity

Select from:

☒ No

(11.4.2) Comment

We do not have any sites that fall under this category.

Ramsar sites

(11.4.1) Indicate whether any of your organization's activities are located in or near to this type of area important for biodiversity

Select from:

☒ Yes

(11.4.2) Comment

To strengthen our commitment to biodiversity and identify sites located in areas of varying ecological risk, we conducted a global assessment to better understand the local biodiversity challenges surrounding our operations. We have one site that is Ramsar site. It will continue to monitor risk levels while engaging in sustainable practices to lower environmental impacts when possible.

Key Biodiversity Areas

(11.4.1) Indicate whether any of your organization's activities are located in or near to this type of area important for biodiversity

Select from:

☒ Yes

(11.4.2) Comment

To strengthen our commitment to biodiversity and identify sites located in areas of varying ecological risk, we conducted a global assessment to better understand the local biodiversity challenges surrounding our operations. We have two sites that fall within Key Biodiversity Areas. Both will continue to monitor risk levels while engaging in sustainable practices to lower environmental impacts when possible.

Other areas important for biodiversity

(11.4.1) Indicate whether any of your organization's activities are located in or near to this type of area important for biodiversity

Select from:

☒ Yes

(11.4.2) Comment

To strengthen our commitment to biodiversity and identify sites located in areas of varying ecological risk, we conducted a global assessment to better understand the local biodiversity challenges surrounding our operations. We have one site that falls within an area important for biodiversity. It will continue to monitor risk levels while engaging in sustainable practices to lower environmental impacts when possible.

[Fixed row]

(11.4.1) Provide details of your organization's activities in the reporting year located in or near to areas important for biodiversity.

Row 1

(11.4.1.2) Types of area important for biodiversity

Select all that apply

- ☒ Legally protected areas
- ☒ UNESCO World Heritage sites
- ☒ Ramsar sites
- ☒ Key Biodiversity Areas
- ☒ Other areas important for biodiversity

(11.4.1.3) Protected area category (IUCN classification)

Select from:

- ☒ Not applicable

(11.4.1.4) Country/area

Select from:

- ☒ United States of America

(11.4.1.5) Name of the area important for biodiversity

All relevant sites as mentioned in 11.4

(11.4.1.6) Proximity

Select from:

- ☒ Up to 5 km

(11.4.1.8) Briefly describe your organization's activities in the reporting year located in or near to the selected area

All global sites located in areas of biodiversity importance are working to reduce their environmental impact through initiatives such as minimizing landfill disposal, increasing waste diversion, improving energy efficiency, and incorporating renewable energy. These efforts support the protection of surrounding ecosystems and are continuously advanced through site-level sustainability programs.

(11.4.1.9) Indicate whether any of your organization's activities located in or near to the selected area could negatively affect biodiversity

Select from:

☒ Not assessed

[Add row]

C13. Further information & sign off

(13.1) Indicate if any environmental information included in your CDP response (not already reported in 7.9.1/2/3, 8.9.1/2/3/4, and 9.3.2) is verified and/or assured by a third party?

	Other environmental information included in your CDP response is verified and/or assured by a third party
	Select from: ☒ Yes

[Fixed row]

(13.1.1) Which data points within your CDP response are verified and/or assured by a third party, and which standards were used?

Row 1

(13.1.1.1) Environmental issue for which data has been verified and/or assured

Select all that apply
☒ Climate change

(13.1.1.2) Disclosure module and data verified and/or assured

Environmental performance – Climate change
☒ Electricity/Steam/Heat/Cooling consumption
☒ Electricity/Steam/Heat/Cooling generation
☒ Fuel consumption

- ☒ Renewable Electricity/Steam/Heat/Cooling consumption
- ☒ Renewable Electricity/Steam/Heat/Cooling generation

(13.1.1.3) Verification/assurance standard

General standards

- ☒ ISAE 3000
- ☒ ISO 14064-3

(13.1.1.4) Further details of the third-party verification/assurance process

Limited assurance over energy data points included in Avient's scope 1 and 2 inventory

(13.1.1.5) Attach verification/assurance evidence/report (optional)

Avient_RY 2025 CDP Verification Opinion Declaration.pdf
[Add row]

(13.2) Use this field to provide any additional information or context that you feel is relevant to your organization's response. Please note that this field is optional and is not scored.

(13.2.1) Additional information

Decarbonization continues to be a priority across Avient's value chain. As an innovator of materials solutions, Avient is well positioned to enable sustainability for our customers. We have established a methodology to standardize our approach to calculating product carbon footprint (PCF) in accordance with ISO 14067:2018 for product carbon footprint and aligned with ISO 14040/140440 for life cycle analysis (LCA). This methodology is available for Avient's product portfolio and receives third party certification from TÜV Rheinland annually. We partner with Carbon Minds and our supply chain to generate the data. In 2025, we completed over 2,600 product carbon footprint calculations for our customers globally. The next phases of this program are to automate the PCF calculation process, creating a digital tool for our teams, and to expand our capability to calculate LCA inventory data.
[Fixed row]

(13.3) Provide the following information for the person that has signed off (approved) your CDP response.

(13.3.1) Job title

SVP & Chief Technology Officer

(13.3.2) Corresponding job category

Select from:

☒ Other C-Suite Officer

[Fixed row]

(13.4) Please indicate your consent for CDP to share contact details with the Pacific Institute to support content for its Water Action Hub to facilitate collective action in priority basins.

Select from:

☒ Yes, CDP may share our Disclosure Submission Lead contact details with the Pacific Institute
